

OP SPOT

Overcoming conversion problems

WHEN a site converts from one machine to that of another manufacturer the process can be a disconcerting, almost traumatic, experience for the operations staff.

After years of working with a well-tried and trusted system, they are suddenly confronted by new hardware and software, and all the jargon and terminology associated with the new machine.

Add to this the fact that DP management often considers the conversion process to be a purely systems and programming matter, and it becomes clear that the operators are faced with a very difficult situation.

Now to experienced operators the change in hardware will not present much of a problem, but the new operating system with its different concepts and facilities will call for greater effort and study on their part.

They must insist on being sent on a basic appreciation course, followed closely by one more advanced in content, well before the new machine is actually installed.

After this the operators must take matters into their own hands and make an effort to get in touch with the appropriate user groups.

These groups are very useful as most maintain a so-called skills register, in which the experience of all the members is pooled.

Many allow first-time users to join their ranks before the machine is actually installed, so that the new members get a full run-down on the problems they are likely to encounter.

Soma, such as the Operations Group of the IBM Computer Users' Association, help the operations staff to get acquainted with the new system. Sometimes staff are taken to other sites where they receive a thorough training.

Back at their own site, the operations staff must persuade the management to give them a say in how the conversion programme is planned and executed.

They must insist that at least two of the operators are used in the conversion team in order to work closely with the systems and programming staff.

Those operators would be responsible for the scheduling of all the testing and helping to produce documentation of a sufficiently high level. They would, of course, keep the rest of the operators up-to-date about all new developments.

Operations Staff

In a teleprocessing environment need full training in TP hardware, software and applications as given in the Infotech Operations training course Teleprocessing for Operators.

HINT OF THE WEEK

Beware hardware errors

THIS week's hint points to the need for operators to be alert to hardware problems.

Hardware errors which occur on disc drives can be serious and expensive both in terms of lost machine time and money costs. If a drive has damaged read/write heads, any disc placed upon the unit will be made defective.

Should that disc then be mounted on another disc drive, that also will be ruined, and so on.

Go in the case of hardware errors on disc drives, the operators must be sure to inform an engineer or the operations manager. In this way any serious problems may be avoided.

That £5 offer still stands

IT seems to me that most operations staff must get a pretty good salary because a couple of weeks ago I offered £5 to anyone who had a hint published in Op Spot. And as yet nobody has taken me up on it.

The offer still stands. The hints may be technical or non-technical in content, but please be sure to state your name and that of your company clearly, giving a telephone number on which you may be contacted during the day.

NatWest night-shift transport not good enough, says NUBE

TALKS are taking place between the National Union of Bank Employees and the National Westminster Bank on two matters concerning operations staff: safety and the calculation of shift allowance.

Concerned for the safety of its members working at the bank's centre in Leaden Street, London E1, the union continues to press for the provision of transport to take staff home at the end of evening and night shifts (Op Spot, March 16).

Already the bank is providing the facility for its Asian staff who were transferred to the centre from the bank's Woolgate House site.

Now the union understands that the bank intends to provide a modified version of the service for all its other shift workers at the site; they will be taken from the centre to a fixed point outside the immediate area.

The union points out that such a service would be of use only in relation to the evening shift and would be no help to staff in the case of the night shift finishing early. It calls for flexibility by the bank.

On shift allowances, the union wants the implementation of a points system by which the allowance is calculated in accordance with the social hours worked by staff. The bank has agreed in principle.

Hornby puts models on micro rails

IN a move that could herald the greatest change in electric model railways since two-rail power pick-up was introduced, Hornby Hobbies are planning to launch a microprocessor-based control system.

Named Zero-1, it is based on a 4-bit chip that was developed specially for the application and the system is due for release in mid-1979.

The basic controller will control the movement of up to 16 locomotives and up to 40 electrically-operated points or signals with only two wires. A 20 volts AC output has been chosen in preference to the standard 12 volts DC, as the AC mode gives better current collection.

The secret of Zero-1 is that power control takes place in the locomotive, not at the rails. Each locomotive will carry a chip placed between the pick-up about the motor. The chip not only converts the AC current back to 12 volts DC but also acts as a speed and direction controller.

Each chip has a user-assigned call sign and up to 18 codes can be used to control locomotives, points, etc. Constant train lighting is also provided even when the train is at a standstill. Additional slave units can be added at £10 each. Chips are expected to cost about £5 and the main controller £30.

Most shops that Computer Weekly spoke to thought the Zero-1 a good idea but, as with most products from the Hornby Hobbies stable, they would prefer to "wait and see" before passing judgement.

The maximum configuration specified for a single controller would cost about £130. However, one model shop proprietor, Bob Wyatt of Wyatt and Tizard, Greet, Birmingham, said that a traditional system for the same configuration could be supplied for about £30.

Wyatt added that three Incos were the most that any child was likely to own, so there was the question of costs to the customer. He was certain that serious modellers and model

Low-cost TV games from GIM

LOW-COST cartridge programmable TV games are being made up for the Christmas market by OEM buyers of General Instrument Microelectronics Systems 8801 chip set.

Consoles are based on the AY-3-8015 interface chip, which needs only a clock crystal, an oscillator and power supply to put games on to a colour TV screen. The chip handles all push-button selector and joystick control signals to the games cartridge. It sells for £2.75.

Each cartridge contains a single game processor chip, which is wired to a robot arm connector. Chips contain up to 24 games and the series includes a motor-cycle set and a road race set.

Further sets of games are currently going to OEMs in sample quantities and should be in full production within the next two months. These are the 8801 Warfare chip with 10 games, the 8801 Wipeout with 24 games, and the 8801 Target with 12 games. Prices are around £8 to £8 in 100-up quantities.

For checking cables

AUTOMATIC monitoring systems for air pressure and telecommunications cables, to be marketed by Dralim Telecomunications of Belgium, can check up to 2,250 transducers for sensing air pressure and flow rates to ensure that moisture does not penetrate and harm circuits.

The series 5300 monitors are based on Intel 8080 microprocessors and will be marketed in Western Europe, Central and East Africa, the Gulf States and the Caribbean under an exclusive agreement with the US manufacturer, Spartan Southwest.

Dralim produces specialist cable protection equipment and counts the Post Office and British Rail among its customers. It recently lost 22 customers to a £200,000 order from the Indian government.

A similar agreement with Garuda Airline covers Australia, Asia and the Far East, while Spartan itself covers the US and South America.

Commodore extends Kim's range

HARDWARE additions have been announced for the Kim-1 single-board microcomputer, providing it with a television interface, extended memory and a full keyboard. In a pocket-size case, the Kim-1 is made by Commodore, is based on a MOS Technology 6800 processor chip and costs £177 including power supply.

The keyboard, called the Rocket Terminal, is a standard ASCII teletype replacement terminal in the shape of a calculator with 40 dual-purpose alphanumeric keys and an 8-character LED display. It can plug into the Kim as an add-on to the hexadecimal key-pad, and costs £240.

The video board allows a domestic television set to be used as a display and costs £150.

Various software packages are also available for the Kim-1, including an editor and assembler called Micro-Ad, an information retrieval package, a mailing list program and a chess playing program. Most of these cost £12.

Italian low-cost access to US databases

LOW-COST access to large-scale databases in the US is being made available to terminal users in Italy by the Italian International record carrier, Italcable. It has installed a Tymnet network concentrator at its Rome

INTERNATIONAL BRIEFING

Canada turns to graduates

A SURVEY of professional job vacancies in Canada has shown that experienced systems analysts and programmers are the most sought-after staff there. The total number of professional vacancies increased in the second quarter of 1978 over the first in Ontario (7.5% increase) and Quebec (5.5%) but not in other provinces.

The survey said government incentives to encourage research and development appeared to have had little effect on professional vacancies. Shortage of some staff had forced employers to hire new graduates instead of experienced men and women.

BABS extended

TO pick up more passenger business in the Middle East, British Airways is extending its BABS online reservation system to the Gulf States. The airline is installing a total of 41 display terminals and 15 printers in sales offices and airports in Bahrain, Dubai, Abu Dhabi, Doha and Kuwait at a total cost of £195,000.

Consoles are based on the AY-3-8015 interface chip, which needs only a clock crystal, an oscillator and power supply to put games on to a colour TV screen. The chip handles all push-button selector and joystick control signals to the games cartridge. It sells for £2.75.

COMPUTER WEEKLY International

NUMBER 85

THURSDAY, AUGUST 3, 1978

First two ICL 2950s in Holland

THE first two ICL 2950 mid-range mainframes in Holland are to go to a big department store and to a mail order company, Ter Meulen BV of Rotterdam. Ter Meulen already has 42 terminals attached to two ICL 1903As, and the new machines are to take over the online mail order processing handled by the 1903As, and development of a new stock control system which will enable it to reduce stock levels of the 70,000 items in its catalogue.

It mails catalogues to its 1.5 million customers 17 times a year, and maintains the address list on the system.

The machines, each with one Megabyte of main memory, will be installed in the middle of next year, and are worth £780,000 altogether.

ICL managing director Dr Chris Wilson is pictured looking on to the contracts are signed by Dr F. H. R. Ter Meulen (centre), director of Ter Meulen, and Dr J. S. Ellbrook, general manager of ICL Holland.

International services policy body to be set up

TO provide a worldwide forum for communications between computer services companies and governments, an international policy committee is being set up by the European Computing Services Association, the Japanese Software Industry Association, and the US Adapeo.

Announcing this, Adapeo vice-president Jerome Greyer said, "This committee will offer the platform for confronting such issues as transnational data flow, privacy and security, and business competition."

Greyer added that following the success of the first World Computing Services Congress in Saratoga (CW, July 8) a second congress is planned for 1980 or 1981.

CII-HB falls behind ICL

LATEST turnover figures from CII-Honeywell Bull indicate that the Franco-American company has just been overtaken by ICL of Britain in volume of business done.

In the half-year to June 30, 1978, CII-Honeywell Bull had turnover of 1,840 million French francs, about £219 million, whereas in the half-year, to March 31, ICL's turnover was £232 million (CW, June 1). Turnover was up 12% over the same period last year; ICL by comparison registered growth of 23%.

CII-HB's turnover benefited from a 137.5 million francs subvention from the French government in the period, almost halved from the 295.4 million francs it was granted in the first half of 1977. Like ICL, CII-HB did 51% of its business outside its domestic market. Profits after tax for the period were 71% up at 71.8 million francs.

'Sperry Rand may shun Soviet trade'

THE decision by President Carter to deny Unisys an export licence for the 1100 series mainframe ordered by the Russian news agency, Tass, has left Sperry Rand chairman and chief executive J. Paul Lyet puzzled.

He indicated that the company might cease seeking business in the Soviet Union.

"If presidential approval is to become a routine part of the export approval process, we may find we can make better use of our efforts elsewhere," he said.

Lyet also questioned President Carter's statement that the proposed sale represented a "quantum jump" in processing power for the Soviet Union, pointing out that the proposed machine, a low-end 1100, was comparable in power to the 1100-IT already approved and installed with Aeroflot for international passenger reservations.

Although there is little question that the licence was denied

cost, but with many sophisticated features and options such as OCR input.

Harry Mallinson, managing director of Wordplex in the UK and managing director-elect of the joint UK company, feels the two ranges of stand-alone computers are compatible because some customers are interested in future upgrading to shared-logic while others are not.

Both product lines will be sold in the US by Lanier, which is principally a dictating machine concern but has been handling AES, Damsell, which currently markets Wordplex in the US, pulling out altogether.

In Canada, the existing AES sales force will sell both lines.

The Canada Development Corp was started with government funds but is now selling off its shares completely to the public. It is paying \$35 million for the two companies, plus additional payments of up to \$25 million, based on performance.

The joint company should become a powerful force in the word processing field of word processing. Most of the firms at the moment are having difficulty making ends meet. It is only recently that a UK firm, Dataplex, went bankrupt (CW, June 8).

Wordplex, over the past two years, has been having discussions with more than one com-

pany over possible mergers. Both Wordplex and AES have been eyeing each other for some time.

Mallinson sees AES Wordplex in a good position to fend off the assaults of giants, such as IBM and Xerox, when they eventually start to move into advanced word processing in a big way.

Their installed bases of hard copy machines are big inhibitions, he feels, and with the time it takes to get into marketing

word processors, AES Wordplex's head start should be a considerable advantage.

The combined firm will have five factories where the hardware for the systems is assembled, four in Canada and one (Wordplex) in California. It claims to have 9,000 WP screens installed worldwide at present, of which 5,000 are AES stand-alone units. Turnover for this year is expected to be \$70 million.

Australian hospitals system

SIX Australian hospitals are developing a patient reporting system for pathology departments based on Data General Nova and software originated by Monash University, Victoria. The results of tests from the biochemical and haematological laboratories are fed into the system on VDUs and cumulative reports on each patient are printed, together with ward reports. Hospital officials say that clerical work and the volume of paper records have been greatly reduced. Eventually, a total laboratory system will include results of all tests.

INTRODUCING THE LYME 4000 FAMILY OF VISUAL DISPLAY COMPUTER TERMINALS

- 4000 character page with 1920 characters viewable at any one time
- 64/96 character set
- Switchable transmission speeds 75-9600 bps (split speeds optional)
- HDX/FDX (Model 4002), Block Mode (Model 4004)
- Dual Interface - RS232C and 20 mA current loop
- Protected areas (defined by reduced intensity)
- XY Cursor addressing, 12" diagonal screen
- 12 x 7 dot matrix upper and lower case
- Character delete and insert
- Up to 16 dedicated function keys
- Printer Port RS232C optional
- On off and user prices £240
- Total British design and manufacture

Databases Overseas. Dardo, and will be similar to the services introduced in the UK early last year by the UK Post Office. The UK service uses the Tymnet network as well as Tymnet to gain access to the US databases.

Corporate forts in the posh district

NEW YORK'S upper Madison Avenue has always been a posh neighbourhood, lined with small expensive shops and the offices of impressive corporations. IBM, for example, has held forth on the south-west corner of Madison and 57th Street for many years.

Now, however, IBM is demolishing its ageing edifice, an uninspired building equipped with a street-level exhibition area, and building a 603-foot skyscraper.

Not to be outdone, American Telephone and Telegraph has assembled a lot just one block away, at Madison and 50th Street, on which will rise its own castle, 648 feet high.

The IBM building, seen from the top, will be a square tower with a large corner cut off, in a style typical of recent New York construction. The building will rise to a flat top. At the street level the rectangular lot will be covered with a glass-enclosed garden, likely to serve as a significant public facility.

Unlike IBM, AT&T's structure is reportedly unimpeachable, with gothic arches at the base and a shaped

top. The AT&T building will be faced with pink marble, while IBM's will be grey-green. Both buildings will be rising from white marble pavements.

Between these corporate forts there will be open spaces and low structures, permitting the two companies' executives to keep an eye on each other.

Presumably, IBM's building will feature a rooftop aerial link to the SBS satellite. AT&T has made no mention of a very long wire to cap its tower.

NEWS FROM AMERICA
BY
HESH WIENER
AND
CAMERON DAVIS

IBM 'decline' impresses Wall St

WALL Street is always something of an enigma. Often it is difficult to separate insight from superstition, or brilliance from dumb luck. Take IBM's quarterly report, for example. It impressed analysts who had expected very poor results, but was a unimpressive showing for the computer giant.

The company said its profits climbed five per cent. But taking account of inflation, this represents a decline. Yet its shares rose by 8½ points in trading after the figures were released. The reason for the rally was the expectation that IBM's earnings would show a numerical decline from the second quarter of last year. The market

had discounted IBM's share value below what was considered a fair market price.

It is also widely believed that this quarter marks the end of slow growth for IBM as 303X mainframes and a host of smaller new products reach customers.

There are also good reports from technical analysts, those stock experts whose projections are based on financial cycles. Indications from one prestigious broker, Drexel Burnham Lambert, are that IBM and other office equipment makers will have good performance from their shares in the short term.

Despite this seemingly good news, the last two quarterly reports from IBM, plus the announcement of the advanced communications service by AT&T may create some uneasiness for IBM and, by implication, other less powerful computer manufacturers during the coming months.

The impact of the 303X series on orders for older equipment was not as severe as that of the 360 or 370 series. Nevertheless, the 303X machines can hardly be called revolutionary. What they would do is the announcement of a new generation due to orders for older equipment?

Suppose, as several industry observers have postulated, that there is an H series of ultra-powerful processors under development at IBM's data processing division.

If the various press reports bear out, IBM will unveil in advance some less powerful, but equally advanced, computer referred to as the E series.

One can hazard a guess that in two weeks quarters resulted from early 303X deliveries — most Wall Street analysts believe that IBM will show substantial earnings gains during the remainder of 1978 — three or even four weeks quarters could come about with the announcement of a series and, several months later, on H series.

Other IBM office products, such as word processing devices are also coming under increased pressure from old rivals and new entrants, such as Exxon.

Where, then, will IBM get the sales it needs to continue its historic growth? Terminal present one great opportunity and small business systems anchors. However, in both those markets there is burgeoning competition, and, particularly in terminals, various opportunities for AT&T, various Japanese electronics companies and much smaller US manufacturers to improve their market penetration.

On May 19, an International Data Corp. newsletter published the results of a study of the prospects for plug-compatible mainframes which could "account for some 20% of IBM's installed base of 303X and 148 and above 370 machines by 1980. This could easily add up to 30% of IBM's sales.

But Wall Street believes the results, not possibilities, and the results have been gratifying to investors. Drexel Burnham Lambert, technical stock analyst, David Upshaw, revised his previously bearish opinion of including IBM.

The question for investors is not so much whether users will buy computers, but whether they will buy today's offerings to allow their installations to stay current in the next generation.

The corresponding question for the major manufacturers, particularly IBM, is whether there should be a clearly differentiated next generation of all.

It may be that even IBM, with its revenues approaching \$20 billion a year and its cash flow at \$5,000 million, cannot afford to repeat its 360 gamble because, win or lose, the shock to investors around the world would force the giant to weather a storm of discontent.

The romance of computer crime

WHILE toy stores still feature electric trains and animated bears with their jerky, repetitive motions, characteristic noises and mechanical — and therefore tangible — innards, a new genre of amusements, built of silent and motionless electronic components, has arrived.

The computer itself, which has inspired some of these games and served as a host for them as well, is perhaps the ultimate toy for the technologically-inclined. Some of the games played with computers are not, however, mere amusements but crimes.

The public fascination with things electronic, including computers, and with human depravity, has now inspired a book on computer abuses that is literate and enjoyable.

Among its readers will be computer professionals, and among that group perhaps a few who at one time or another wondered whether they might be able to achieve what the subjects of Computer Crimes almost got away with: the perfect computer crime.

Some of the cases in Computer Crimes, published in the US by Thomas Crowell Co of New York, involve the execution of a common fraud with the aid of a computer. The machine makes such frauds far more fascinating than similar crimes executed with pencil and paper.

And, because computers are often used to run the vast financial empires, data processing frauds involve enormous sums of money.

Author Thomas Whitfield, a journalist on

the New Yorker magazine, has selected a few cases, for example, and refers to many others in passing. His study of mischief carried out within the confines of a machine was part of a series of articles in New Yorker.

To some cases, such as the Equity Funding affair, Whitfield found ideas that previously appeared in literature, such as Nicolai Ogog's novel, Dead Souls.

Computer Crimes is really a book about man's relation to the computer — or at least the dark side of that uneasy marriage. If the vast financial empires, data processing frauds involve enormous sums of money.

Author Thomas Whitfield, a journalist on

Attorney warns: Don't arbitrate

IN a spirited essay published in the June edition of Computer Negotiations Report, Thomas Christo calls most contract arbitrators "freaks" and advises disgruntled users to pursue their discontent in the courts.

Christo, the Boston attorney who fought for buyers in the Catmore case against IBM, the Colorado Blue Cross dispute against Honeywell and the Sheaffer Brewing suit against Electronic Data Systems, believes that users who have been sold a bill of goods can get compensation via the courts.

Many such disputes are submitted to binding arbitration, a practice that Christo believes is biased in favour of the vendor.

Christo, who was one of the founders of the weekly newspaper, Computerworld, and who later served as one of the newspaper's editors, studied law and set up his nationwide practice in Boston.

His clients are often buyers of computer equipment and services and his dynamic courtroom tactics have won him the admiration of many disappointed users and the respect of vendors.

Stating that the arbitrators to whom a user would entrust a dispute would, no doubt, be drawn from the data processing profession, Christo argues that most of them are not particularly competent.

They "sign up for the American Arbitration Association's list because they have little else to do. While there are obviously many very capable and erudite members, there are also an incredible number of duffers."

He goes on to say that arbitrators tend to blame the user for difficulties, while the industry has matured to the point where vendors should be able to provide equipment and services that truly meet the user's needs.

Christo also believes that the public spectacle of a jury trial, while potentially embarrassing to the user, is actually more humiliating to the vendor.

Computer Negotiations Report, \$198 per year, International Computer Negotiations, Inc., 1431 E. Smith Avenue, White Plains, Florida 32782, USA.

ATLANTIC Computer Leasing Ltd

ATLANTIC ANNOUNCES EXCELLENT INTERIM RESULTS FOR PERIOD 1/1/78-30/6/78

Atlantic Computer Leasing Ltd. are pleased to announce interim results for first half of 1978 as follows —

	1H 1978	1977 — the year
Group Turnover	£4,681,730	(£6,684,535)
Trading Profit	£608,550	(£723,285)
Investment Income	£65,920	(£14,614)
Gross Profit	£682,470	(£738,795)
Net Assets	£1,897,662	(£1,288,074)

continuing strong demand for 370. Please lease program — availability of second-user systems much improved — improved profit picture due in the main to greater productivity within the Sales Organisation and the availability of reasonably priced second-user 370 systems for lease — continued growth through 1978 expected with forecast turnover of at least £10m.

Datacoms net for US banks proposed

A PROPOSED private voice mail data communications network that would be shared by the 14,000 banks in the US is one of the developments discussed in a report on data communications and banking now available from the US consultancy, International Resource Development Inc.

The report also looks at the five areas in which electronics funds transfer systems are being implemented or considered in the US. These are automated teller terminal operations, point-of-sale and credit verification networks, wholesale funds transfer, Giro-type composite billings services and automated clearing house networks.

In the last area, the 25 clearing houses in the US are now being linked by a data network that will enable a cheque issued in, say, San Francisco, that finds its way to, say, Cleveland, to be cleared by computer communication between the clearing house at Cleveland and the San Francisco clearing house.

The network is being implemented under the aegis of the Federal Reserve Bank, the US equivalent of the Bank of England.

In the point-of-sale area the report points out that 17 million cards have now been issued in the US that provide

immediate debiting of consumers' bank accounts at the time of purchasing an item.

Although the report is primarily about US banking it discusses the Giro services provided in Europe, but concludes that composite billing services of the Giro type will develop slowly in the US.

The proposed private network for the 14,000 US banks would be licensed from the US telecommunications giant AT&T and its main purpose would be to save money by sharing lines for voice and data communications.

The feasibility of the network is now being studied by AT&T and the American Bankers' Association. It will most likely take a form similar to that of the International Airlines private network, Sita.

The existing message switching wholesale funds transfer systems, Fed Wire, which is run by the Federal Reserve Bank, and Bank Wire II, operated by the Independent Bank Wire Association, will both probably be integrated with the proposed network.

Another prediction made in the report is that large banks in the US will grow in dominance through EFTS because they can support large staffs of technical experts to develop EFTS and will be able to make EFTS services

available to their correspondent banks in small towns.

Correspondent banks are smaller banks with which the big banks have arrangements to provide special services and they are likely to benefit from EFTS at the expense of small and medium sized independent institutions.

Looking at the effect of EFTS development on the computer equipment industry, the report sees modem sales declining because of the use of digital data networks, while banking terminal sales, not surprisingly, are expected to remain very strong. Current sales are \$300 million in the US alone.

The report also looks at the expected impact of electronic mail and satellite communications networks on funds transfer, both domestically and internationally.

System Aid for judges Down Under

Software developed by UK software house System Aid helped in a recent produce competition (pictured left) run by the Royal Agricultural Society of New South Wales. The system, Resultmaster, was used to handle the complex marking system needed to judge a vast quantity of fruit, vegetables, wine, and agricultural produce. Resultmaster is part of the Checkmaster system run by the society on its ICL 2903.

IBM poised to lead desk-top market

A RAPID growth in sales of business desk-top computer systems will make IBM the leader in the desk-top computer market over the next few years, according to a study now available from the US consultancy, Venture Development Corp.

The study predicts that sales of all types of desk-top computers will grow from \$243 million in 1977 to \$1,800 million in 1983, and that the percentage of total sales accounted for by machines for general purpose business applications will grow from 25 per cent in 1977, to 43 per cent in 1983. The report points out that IBM has its greatest strength in the business segment of the desk-top computer industry.

VDC does not foresee IBM's dominant position

extending into the engineering and scientific desk-top market, but predicts that this will grow by a much lower rate over the next five years than the business systems market — by 31 per cent a year compared with 52 per cent.

Apart from IBM, the three other leading desk-top computer suppliers are Hewlett-Packard, Tektronix and Wang. The four together, according to VDC, account for 93 per cent of the total market at the moment.

VDC defines a desk-top computer as a complete microprocessor based system selling for less than \$10,000.

Now parents can curb children's TV with micro 'censor'

PARENTS worried about the effects of television on their children will soon have technology coming to their aid. A US husband and wife have devised a microcomputer-based censoring device that attaches to the TV set and cuts out all programmes except those the parents have approved of.

The "video censor" is connected in between the aerial and the set, with a lock so that it cannot be removed by unco-operative offspring.

The parent keys in the day, time, channel, and duration of each programme that is acceptable; a choice of more than one programme at any given time is possible. Then the censor filters out all programmes that have not been specified.

The unit resembles a pocket calculator and contains a microprocessor, a clock, and a tuner to separate the channels, working on both VHF and UHF. It is expected to cost around \$180.

Ray and Joanne Dobson, the inventors, he runs an advertising agency, she is a lecturer on "the impact of television."

Telephone hand sets are part of the furniture

IN the US, you may buy your own telephone instrument and, once you or the manufacturer of the instrument have met certain specifications, install that instrument in your home or office.

As a result, independent companies have increasingly sought part of the telephone instrument market by designing unusual cases for their products.

A report on the retail market for telephone instruments, in a study of this market, the report states that \$115 million will be spent this year on independently-made telephone hand sets, and that by 1982, Americans will spend between \$10 million and \$80 million for

They are sub-contracting out the production of the video censor, and hope to have the first batch in four months.

According to Dobson, interest in the machine in the US is high. It will screen out not only broadcast TV but cable TV, video games and other distractions that are proliferating in American homes. There is particular concern about cable TV, he says, because those stations have taken to broadcasting pornography in a big way.

He also claims that the censor can save money: "because of all the junk that is sold to children on television these days."

The Dobsons approached several manufacturers of TV sets to see if they would like to build it into their sets. At first they were lukewarm to the idea because it would cut down the usage of sets and make them last longer. Now, however, some are "coming out of the woodwork," convinced of the market potential of this machine.

The Dobsons are hoping to sell the censor in the UK soon, as well as the US; they feel there is a big market for it here too.

such equipment.

Among the other items that will become more common are the obnoxious automatic diallers that play an advertisement to the called party when he or she answers the phone.

The book, which describes the business of filling a world with machines that, once installed, spend their days and your money making senseless calls to other machines, is the first concise explanation of this burgeoning electronics market.

We stripped the ICL 1500 and rebuilt it for action

Over the past 18 months ICL have been working to improve the 1500 series, one of the world's most successful series of mini computers, with 8000 sales to its credit.

So far they have been used in singles and in clusters for distributed processing, transaction processing, for data capture and stand alone processing — now the limits are only as far as your horizons.

Once again, the ICL 1500 series is right up in front. More Power. The basic 1501-40 model has more power and a more capacious store. Above it are two new models: 1501-41 with a new 5mb disc, and 1501-43 with 2 x 2.5 FDSs. The bigger 1503 is also enhanced and has the capacity to add extra disc drives up to 20mb.

And all models have communications facilities. ICL 1500 for the communications era. The significance of these enhancements, together with other hardware and software enhancements (COBOL is now available) is that ICL 1500 now has a powerful interactive capacity.

For example, ICL 1500's linked to a central computer, could take over the mental chore of data validation at the point of transaction. They'd save expensive mainframe time and improve accuracy.

Or ICL 1500's could be used as local processors, for example with a telephone ordering service, and access the central computer for information not held locally.

This robust machine can now be plugged in anywhere, wherever the action is. Capturing the transaction as and where it happens, and passing it on. ICL 1500 was always a brilliant and economical batch system. Now it's the foremost small multi-processing system.

Another example of ICL making a good product even better.

Project Prelude opens doors to office of future

FOR its teleconferencing evaluation in Project Prelude, Aetna used a satellite link between its headquarters in Hartford, Connecticut, and its Chicago office. According to John J. Donovan, Aetna's director for corporate data processing support, the evaluation had four objectives: to assess the cost/benefit potential of such advanced communications services and opportunities for increased productivity; to increase user awareness of communications alternatives created by emerging technology; to determine likely costs and schedules for the new services; and to evaluate satellite communications and associated terminal and other equipment.

In a series of two-hour sessions, various departments and interested persons from Aetna's home office and Illinois operations conducted departmental meetings and training programmes to evaluate teleconferencing's potential for marketing, administrative and in-

structional activities. Donovan noted that marketing, training and administrative functional areas were equally represented among participants, as was each major operating division. Most of the people were from middle management, though there were several senior divisional and corporate vice-presidents.

In comparing teleconferencing to travel as a method of organising a meeting, 69% of Project Prelude participants viewed teleconferencing favourably, with training and underwriting personnel more positive, and marketing and administrative personnel less so. Participants considered the most important advantages of teleconferencing to be saved travel time and the ability to have the "right" people more readily available. Saved travel expense and quicker decision-making were viewed as less important, as was the capability of getting more people involved in a video meeting than would be possible with travel.

Donovan reported that no one type of meeting surpassed others when respondents answered the question: What types of meetings do you think may be suited to teleconferencing? "Some felt only large groups would be ideal, while others felt only small groups," Donovan said.

"Marketing meetings to present new products or provide sales support were identified. Training sessions for technical or administrative employees, involving detailed form-preparation activities, as well as unstructured seminars or workshops requiring visual aids were mentioned. All sorts of general administrative meetings were identified, from planning to job performance review meetings."

In general, Donovan feels that teleconferencing can be used effectively in certain marketing, training and administrative activities to eliminate travel time and expense. "Taken by itself, teleconferencing may cost as much as, if not slightly more than, saved out-of-pocket expenses and lost executive time," he noted. "Real savings, however, will be achieved by re-applying otherwise lost travel time to more productive work, and by being able to do things not possible today."

"We expect the projected hourly use charges can be favourably reduced by exploiting new technology developments wherein video requirements are combined with voice, data and electronic mail needs in an integrated corporate communications facility. The overall benefits analysis is strengthened further as we move into the 1980s, when increasing personnel and travel costs are compared to electronic communications costs."

In their analysis of the office of the future, other insurance companies have also concluded that operating costs may not decline with the introduction of automation. Seymour Starr, vice-president of Massachusetts Mutual Life In-

surance Company, for one believes that hardware and software costs will offset savings in secretarial and paper-related expenses, and operating costs may even increase.

Speaking on the office of the future at a recent meeting of the Life Office Management Association Systems Research Committee, Sternberg noted that "once hardware and software costs have dropped to practical levels, cost justification through direct savings will give way to arguments of faster, better and easier."

Sternberg believes that one of the most profound effects on the office of the future will be the need for closer integration of the responsibilities for data and voice communications.

"Most companies still separate their data processing organisation from the administrative function that handles telephone and mail communications," he noted. "As digital technology begins to be applied to voice signals, it will be

The acceptability to the business community of integrated satellite communications services, such as the "automated office", electronic mail and teleconferencing, was shown to be more than a salesman's dream by the Project Prelude experiment, carried out by Satellite Business Systems, For Project Prelude, SBS, which is jointly owned by IBM, Comsat and insurance company Aetna Life, provided the first US link-up of business equipment with high-speed satellite communications channels

for voice, data, facsimile and teleconferencing. Users in the experiment included Rockwell, Taxaco and Aetna Life itself and the results showed considerable enthusiasm for the services (CW, July 13). In this article, Boston-based communications expert MORRIS EDWARDS looks in detail at Aetna's Project Prelude experience, and at analyses by other companies of the automated office of the future might be implemented.

data will be organisationally required."

In another paper, Robert A. Shafro, senior vice-president of New England Mutual Life Insurance, termed the office of the future a "merger of technologies, organisations and ergonomics."

In this era of heightened competition, cost control and efficient management techniques, Shafro stated, the life insurance industry in particular has little choice but to harness data processing, storage and communications technologies for its office functions, just as it has applied automation to much of its new business, premium collection, policy holder service and accounting functions.

As Shafro sees it, the challenge is threefold: to blend technologies involved with communications and data, word and image processing which, formerly, have presented piecemeal solutions; to integrate previously independent information reservoirs and unrelated organisations of the corporation, such as data entry and data processing with word processing, voice communications and records management; and to adapt tomorrow's office environment to the vast numbers of people that must make it work.

As candidates for automation, Shafro identified the functions of information capture, document creation, information search and retrieval, information routing, document formatting and outputting, work-in-process control, and personal services. He noted that much of the necessary equipment to automate the office is either currently available or in prototype form as discrete devices.

What is needed, he believes, is a solution to the problem of hardware compatibility and the development of software to support image storage, retrieval and transport, as well as to control work flow and to handle text processing requirements. "Since processing and storage will most

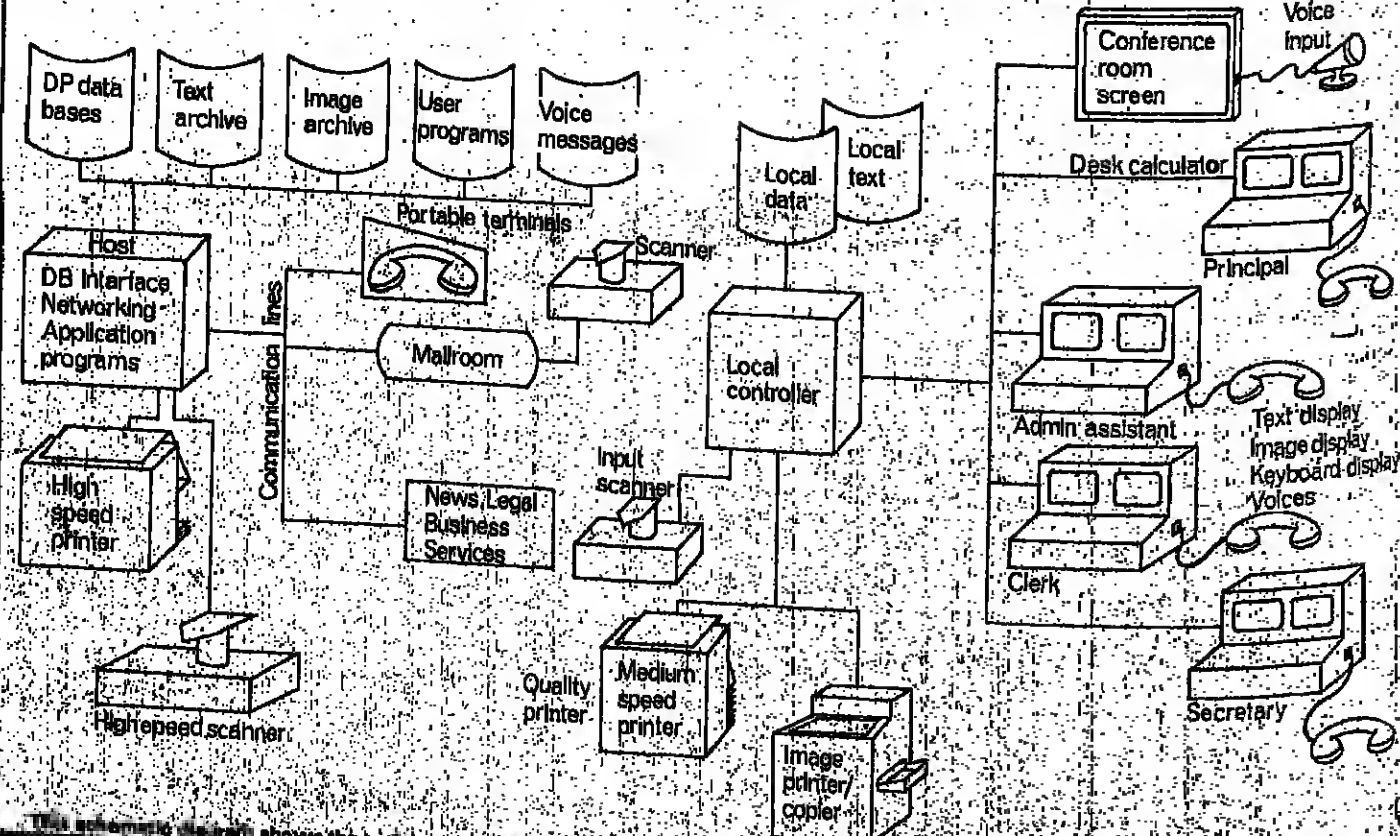

likely be split between the central host and local workstation," he added, "host and local programming code must be compatible."

Shafro believes that the transition from today's office environment to the office of tomorrow will unquestionably take the form of gradual evolution rather than a rapid revolution. One problem, he feels, is the lack of understanding and definition of the "total office" requirements — a deficiency evidenced by the uncoordinated attempts of computer, terminal, word processing, micrographics, copier, facsimile, photocopying, dictation and communications vendors at partial solutions.

"Even among the giants like IBM and Xerox, which offer more pieces of the total office system than specialised vendors, there is internal disagreement about how all the elements should mesh," Shafro said. "Confused users will be forced to hedge, to make a 'creeping commitment' to their new automated office as appropriate products unfold and technologies merge."

Another factor facing the evolution will be the organisational impact of information technology. "Previously unrelated areas of the word processing, call room, telephone operation, space planning, the file room, the microfilm centre, the printing centre and the data processing department — must join hands in a co-ordinated approach," Shafro noted.

"Probably the single most important factor for the incremental electronic office, however, is the human engineering aspect. More people, in more departments, at more levels of the corporate hierarchy must interface with all sorts of terminal devices. Ergonomics, the science of harmonising people, environment and technology, will play a significant role in shaping the successful future office."

This schematic diagram shows the systems that would be used in the office of tomorrow, as envisaged by Robert Shafro of New England Life.

Govt spends \$36m on Privacy and Freedom of Information Acts requests

THIRTEEN agencies of the US government spent a total of almost \$36 million over three years for processing Privacy Act and Freedom of Information Act requests, the US General Accounting Office has reported. During fiscal years 1975-77, GAO found, the 13 federal agencies handled some 147,000 PA and FOIA requests for information.

According to GAO's study, the number of information requests to individual agencies ranged from a high of 51,000 received by the Justice Department's Immigration and Naturalisation Service (INS) to a low of some 1,000 received by the US Postal Service's Inspection Service.

The three Justice Department agencies studied by GAO — the INS, the Federal Bureau of Investigation (FBI), and the Drug Enforcement Administration — accounted for about 66 per cent of the total number of information requests made to the 13 agencies. Those same three agencies incurred 45 per cent of the study group's total costs of compliance with the two Acts.

GAO also pointed out that the FBI spent well over one-third of the total costs, or \$13.3 million, over the three-year period. The number of information requests to the FBI totalled 43,368.

A breakdown of operating

costs associated with the Acts shows that about 80 per cent went for salaries of personnel involved in administering the laws. Among the 13 agencies, those personnel numbered 630 (442 professional and 188 clerical) during 1977.

Other major cost items cited by the agencies were granting the access requests, accounting for disclosures, and publishing and distributing rules and notices required under the laws. GAO cautioned that one major cost factor is excluded from the \$36 million total. That is the cost of PA and FOIA law suits. The Department of Justice, which litigates those cases for the government, had 989 suits pending at September 30, 1977, a significant increase over the 706 pending cases on June 30, 1976.

The majority of the law suits relate to agency denials of requests for record access. Justice Department officials estimate that FOIA/PA litigations cost a total of \$806,000 during fiscal years 1976 and 1977.

Of particular interest to the Senate Committee on the Judiciary, which requested the GAO study, is the audit agency's findings on the category of requesters (i.e. curiosity seeker, Press, researcher, etc.). While that information is difficult to

obtain, particularly as the Acts do not require that citizens state their occupation, GAO said it was apparent from the agencies studied that the most dominant category of requesters was individuals who have been or are subject of investigations by the agencies.

"Some of these requesters were also identified as being criminals," GAO's report said. That finding supports the arguments of federal law enforcement officials who complain that FOIA requirements actually aid criminals and spies. For example, they claim, spies can obtain government files that detail methods employed in trapping or tracing suspects. Furthermore, they argue, it is possible for conspirators to forge a request from an informant, and readily spot an informant if he does not have a file.

Additionally, the officials have testified in Congressional hearings, fear that records could become public has cut down the willingness of local police to send information to federal agencies and on the ability of these agencies to promise confidentiality to informants.

A legislative proposal being considered by both houses of Congress would require the government to inform citizens whenever it intended to look at their personal records held by a third party, such as financial institutions. The Bill would also give citizens the right to oppose such access before the records were turned over.

Additional, the officials

WASHINGTON
REPORT
BY
CAMERON DAVIS

NBS to press IBM's I/O channel-level interface as standard

AFTER a cooling-off period of a few months, the US National Bureau of Standards has again mustered the courage to push adoption of the IBM-designed input/output channel-level interface as a federal standard (CW, July 27). And instead of capitulating to the fiery arguments launched by the standard's opponents, primarily the mainframe manufacturers, NBS has strengthened its proposal and tightened the implementation requirements.

By proposing a package of interface standards, rather than the individual I/O interface, NBS hopes the more complete offering will be more difficult to tear apart, a bureau spokesman explained. The package includes the I/O channel-level interface, an accompanying power control interface and, for the first time, a proposed channel-level operational specification for magnetic tape.

The proposals, if adopted, would constitute the first federal information processing standards that cannot arbitrarily be waived by individual

federal government agencies. To pacify the opposition's expressed concerns that the I/O interface could soon become, or already is, technologically obsolete, NBS says it will continually monitor the impact of the standards on federal computer operations. The proposals contain provisions requiring NBS review within three years of adoption.

Another attempt to appease the mainframers is NBS' invitation to representatives of the computer industry for participation in a Research Association Program to assist in developing interface standards for federal use. Under the program, individual companies or trade associations can sponsor technical experts to work at NBS with the Bureau's scientists.

Public comments on the proposed standards are due on August 18. An NBS spokesman says the bureau hopes to forward the package to Commerce Secretary Juanita Kreps late next month for final endorsement.

OCS.A new member of our fast growing family.

The Supplier of proven systems software to IBM DOS and DOS/VS users world-wide has again added to its product range. SDI now provides OCS the package which brings IBM operating techniques up to date.

Features include:

- Console/hardcopy recording
- Spooling of messages: buffering of replies
- VDU as console and job entry device
- Browsing of output queues

Resulting in:

- Improved reliability through console back up
- Increased operator and programmer productivity
- Significant increase in throughput

OCS is available now to all DOS and DOS/VS users.

SDI's current product range includes:

- GRASP and GRASP VS: The computer resource management systems giving extended functions and enhanced performance
- EPAT: The only proven magnetic tape library management system
- FLEET: The comprehensive management package for all IBM format program libraries

Reduce costs. Improve performance. For further information contact:

Pocket terminal acts as a telephone for the deaf

A POCKET-SIZE terminal, intended to let deaf people converse by telephone, is being developed by SRI, formerly Stanford Research Institute, under a grant from the US Department of Health Education and Welfare. The unit is self-contained, and includes a miniature alphanumeric keyboard, three-line display, acoustic coupler and battery power supply, all in a box measuring seven inches by five.

Being portable, the terminal could be used from a telephone kiosk. Since it uses a standard computer communications system, it could also work as a computer terminal, and therefore has a large potential market which would make it cheaper to mass produce.

The current design has a liquid crystal display, three lines by 12 characters, but a display of four lines by 16 characters is planned.

The signal is picked up from the receiver of the telephone by induction; this reduces the effect of ambient noise which is one of the drawbacks of acoustic

A mock-up of SRI's "Deaf Telephone," an entirely self-contained miniature terminal that clips on to the handset of any telephone.

couplers. However, the transmitter is driven acoustically.

Dave Flystra, leader of the development project, points out that the "Deaf Telephone" with its cramped keyboard, will be not so easy to use as a normal terminal, but the ability to carry it around in one's pocket should

be an enormous advantage. Two communications modes are available. One is standard 8-bit ASCII at 110 or 300 bits per second, and the other is the 5-bit Baudot code used by the existing "Deaf Teletype Network" in the US.

Four prototype units will be completed in the next few weeks, for use in trials. SRI has no manufacturing facilities itself, but if the project comes to fruition an outside company could be licensed to make the machines in quantity.

Tax gathering in Pakistan

THE KARACHI city authority is considering installing computers to assist in tax gathering and has opened discussions with several manufacturers.

The authority, Karachi Metropolitan Corporation, wants to build up records on each taxpayer.

COGARVIEW

Future of still and home movie cameras

IT'S the industry game of the moment, of course, guessing in what new area of consumer technology micro are likely to make their mark. But I want to dwell a little on photography, a subject in which, as friends and close acquaintances will confirm, I have more than a passing interest.

Microelectronics has already done wonders for hand-held television and film cameras, of course, making possible a documentary treatment more naturalistic than Grierson, one of the pioneers of film documentaries,

could have dreamed of. Even so, movie cameras remain bulky and unwieldy objects; there must still be room for a lot of improvement.

But I am not primarily interested here in TV and movie cameras; they are already in good lands. Their unit price justifies, and their profit margins fund, a level of R&D spending which can be relied on to exploit any relevant advances in microelectronics.

What I am concerned with is the question whether there is to be a significant micro contribution to the future of still and home-movie cameras. In the short term I am very dubious. Anyone visiting Geneva or Hong Kong or Singapore must stand aghast at the enormous volume of photographic equipment being churned out by firms all over the world; cameras are a staple with the ever-growing discount store phenomenon. I know it's a popular hobby, but can anyone (other than the perennial Polaroid) really be making any money in this market?

The pace may, however, be forced. Kodak's time-honoured, and now court-challenged technique for disposing of rivals is to introduce new developments at such speed that no one can draw breath before there is some new technology to catch up on. It has successfully generated a kind of R&D perpetual motion machine in which past success provides the cash for future developments which start a new hand-wagon rolling, providing the cash for yet another development, ad infinitum.

And there is a new threat — the base technology giants. If Texas Instruments and company find it more economic to build calculators and watches than to provide the chips for others, might not the same calculation apply to make them want to "go vertically integrated" in cameras? The traditional camera market is in just the sort of state of flux now that the watch market was in when electronics came along. The old market leaders are being challenged by the radical new departures of Polaroid and now the promised Nijmalo 3-D camera (which has the potential anyway to completely re-shape the market); they are in no position to take on another fight. The Texas Brownie? The Intel Instamatic? Why not?

Well, one possible reason why not is the highly skilled business of lens-grinding, which will eventually become the sole distinction between good and bad cameras. Presumably semiconductor manufacturers would have no wish to get entangled in this particular bed of thorns. They would have to buy in the lenses, and that could make the whole concept look a lot less attractive.

Would an "on-board" micro be a great advantage to camera buffs? Speaking as the owner of a dozen different cameras and an extensively kitted-out darkroom, I would like to say no. For me, the art lies as much in the precision work on the aperture, focus and film speed as in the composition of the shot.

It's quite evident that technology sells cameras; otherwise why would there currently be such a mad frenzy raging over

automatic focusing? The Japanese, as ever, are out ahead with the Konica C35F, but Polaroid is not far behind with its ultrasonic focusing system whose advantage over the Konica camera will be that it retains a manual option. As Honeywell (where we just talked about base technology?) is developing its optical averaging development and the scorn of fellow engineers.

Polaroid says that it will not sell its ultrasonic device separately from the whole camera, so it is an add-on, because it has to be integrated with the rest of the camera's electronics. This sounds like micro-talk to me. I doubt if it will be long before auto-focusing, shutter speed and aperture size control, light metering and very likely film wind-on will be incorporated in a neat little silicon package.

Microprocessing is just an example of what I see as a gradual convergence between photographic technology and computer technology, anyway, and I am not talking about COG.

Some interesting developments have lately been revealed about the use of computers to reduce or even create visual images. The British firm Quantel, for instance, sells a device which digitises a TV video signal, reconstructing it (or any desired part of it) as required. In effect this means that an image can be instantly re-run, with a zoom to any portion of the original picture, irrespective of its relevance at the time. Though television companies are using Quantel's output, one can see on obvious future market in security systems.

More 1984-ish is the work being done by John Whitney Jr. at Information International, Inc. of Los Angeles. He has developed a technique for creating life-like "photos" of events that never in fact took place, using a 250K Graphics 1 minicomputer roughly equivalent to a Digital DECsystem 10) to simulate the co-ordinates of visual images. But let's take the thing a bit further. It's quite easy to imagine a new type of camera employing an electronic shutter — a wafer-thin piece of piezoelectric crystal which has variable opacity based on an electric voltage — which allows almost infinitely variable shutter speeds. CCD imaging of, say, 400 x 400 lines, and a tidy cassette storage system. I am sure it need not be larger than a current full-frame 35 mm job.

There wouldn't be much involved in operating this camera, but that wouldn't be important. The artist-photographer's job would really begin until the film was back to the studio where it would be fed into the viewer-editor graphics computer.

Images could be merged, perspectives altered to construct fascinating new worlds of visual imagery. It sounds a way of knowing, but then so do video tape and video stills — dozens or so years ago, I think, someone was working along these lines in the US, with big investments, and within six years I'd be surprised if someone in Japan had not cornered the market.

TIM PALMER REPORTS FROM HYDERABAD

India pursues a self-sufficiency policy

There are fewer than 20 countries in the world with a locally owned company designing and manufacturing computers — and one of them is India. The company is Electronics Corporation of India, which has mastered 12 and 16-bit minicomputers and is now moving on to 32-bit mainframes.

SINCE independence, successive Indian governments have pursued a policy of internal self-sufficiency, so that in 1978 there are very few items on sale in India which are not manufactured or assembled within the country. "Be Indian — Buy Indian" is inscribed on the back of millions of brightly painted trucks, and although, as in all countries where imported goods are in short supply, there is great kudos in using imported goods, most of the items manufactured in India are of a high quality.

The Indians, however, have been slow to master mass-production techniques so that even with items like television sets, five companies manufacture a total of only 100,000 sets a year. But versatility and inventiveness are widespread, no more so than in the electronics industry where a single public sector company, Electronics Corp of India, manufactures small quantities of an astonishing range of high technology items.

Founded in 1967, ECIL is headquartered in Hyderabad, in the central southern state of Andhra, and is an offshoot of the Department of Atomic Energy. ECIL's 6,000 employees manufacture television sets, oscilloscopes, electrical and electronic components, instruments for a wide variety of applications including aircraft, X-ray equipment, and microwave and other antennas. Multi-layer printed circuit boards up to six layers thick and up to two feet square are manufactured in-house. ECIL also builds computers.

The first computer was the second-generation TDC-12, a 12-bit mini, unashamedly copied from the Digital Equipment PDP-8. Only 22 of these were built before ECIL moved on to a third generation integrated circuit version, the TDC-312, of which 45 have been built so far. There is also a 16-bit mini-similar to the PDP-11/34 in performance, called the TDC-316, and 40 of these have been manufactured.

Not content with the constraints of minicomputer manufacture, ECIL now has its first 32-bit machine under test. Similar in architecture to the Xerox Sigma 7, the TDC-332 comes with 128-Kbyte or 256K-byte core memories, and is claimed to match the performance of an early IBM 370/135. It will support up to four 29 megabyte disc drives, 120 megabyte tape drives, and one low-speed channel. The larger version is under development.

Compeda's high technology software for Italy

ITALY is the latest market to be addressed by the NRDC's Compeda subsidiary (CW, February 1, 1977). The company is to exhibit its high technology software at the international conference on interactive techniques in computer-aided design at Bologna, Italy, between September 21 and 23.

Products featured will include the Design Management System (DMS), the Graphic sys-

tem has a floating point processor, decimal arithmetic facilities and a separate input-output processor.

ECIL plans to switch from core memory to 16K-bit semiconductor memory chips from Mostek.

The TDC-316 mini comes with a standard 32K-words, with a 128K-word maximum, and is priced at a formidable £180,000 for a basic system. It has two buses, one for peripherals which provides direct access to 4K of the memory, and the other for the rest of the memory. Several special systems have been put together by ECIL for specific customers, while a message-switching system based on two TDC-316s for the army has just completed tests.

At the bottom of the scale, ECIL is just beginning to get a micro business system into the market. Called the Micro-78 and built around the Intel 8080A, the machine has an import content of only 15 to 18 per cent. It supports up to four floppy disc drives, again from BASF, and a minimum configuration with 8K-bytes of memory and an imported Teletype costs £5,330. Bigger systems can cost as much as £30,000, and ECIL has built five so far and plans 35 for the current year.

Peripherals manufactured include teletype-compatible and RS232C interface display terminals, of which about 20 have been made, a card reader, and a tape drive which has an imported servo motor, but is otherwise entirely indigenous. ECIL also makes cure memory, and is currently working on a \$4 million contract from the Soviet Union for core memory stacks. The 18 mil cores are imported and ECIL does the stringing.

On the software front, ECIL employs 150 people, 50 doing system software and the remainder working on applications. Software developed includes a cross-assembler for the TDC-316 which runs on ECIL's CII 115 55 mainframe; a 1401 cross-assembler and emulator to run on the 316 and Cobol 65 and E-Cobol compilers for the 316. E-Cobol is a Cobol-like assembly language. A database management system for the mini is under development, a real time operating system is planned, and software to enable the Micro-78 to be used as a four-station data entry system is on the way.

A major effort is going into software for the TDC-332 mainframe. A model simulation language has been developed, Fortran, Basic and Cobol com-

pilators are under way, and a multi-programming operating system should be ready within the next year or so; followed, two years later, by a time sharing operating system. Applications include support

for a police fingerprint processing system on the TDC-312 which is in use in Delhi and Bombay and wanted by other police forces. The hatch system gives a four-hour turn-around on inquiries.

Belgians badly informed about DP costs—report

DATA processing in Belgium is the subject of a new report by the Brussels-based Sobemap company, part of the Metra group. The results are based on a survey conducted in 1977, to which 91 organisations responded, and follow a similar study conducted in 1972.

The report is divided into three main sections: cost, applications and operating procedures, and the management of computing facilities. In each area, findings are separated according to installation size, and trends since the earlier report are highlighted.

The report notes that many organisations remain badly informed about the capabilities and costs of their computing facilities.

Software costs in particular are very poorly understood, despite the fact that software expenditure is doubling every three years, as opposed to a four-and-a-half year cycle for

hardware, says the report. Among significant changes since 1972, the report notes dramatic increases in multi-programming and distributed processing, particularly for data capture in large concerns.

"L'Ordinateur dans les Entreprises Belges. Available from: Sobemap, Place du Champ de Mars, 5, B-1050 Bruxelles, 1.500 Belgian Francs.

Dual Criterion for Sydney

A DUAL NCR Criterion computer system has been installed by the Legal and General Assurance Society at its central office in Sydney, Australia.

The dual is worth \$4.2 million and consists of two processors, a 512K Criterion 8570 and a 384K 8550. Peripherals include six 200 Mbyte disc drives, six tape drives, two line printers, and five VDUs.

Most companies buying computers don't know what they are doing

Recent surveys show that more than half of the companies buying computers have contacted only one manufacturer. This is strange, taking into account how large their investment is. Because we do not believe that anyone can be sure of the right choice without knowing what other firms can offer. Big is not always best. Although Norsk Data is not among the biggest, our NORD computers have often come out

first in the hard international competition. With the NORD-10/S, associated peripherals and software programs, we can offer flexible and economic computer systems for most data processing activities. A NORD computer system will never be too limited to meet new requirements. The initial installation can be extended as new demand grows. Give us a call and find out how we can co-operate.

Norsk Data
Larsenveien 57, Postboks 163,
Oslo, Oslo 5,

France: Norsk Data s.a.r.l., 64 Rue de Meyrieu, 91240 Evry-Val d'Europe, Tel.: 5041 65 41.

England: Richard Norton (NORD) Ltd, NORD House, 17 Belle Street, London N1, Tel.: 01-2785501, Telex: 299537.

Norsk Data A/S develops, produces and markets NORD Computer Systems. The NORD systems have found extensive use in research and education, process control, data processing and behaviour in the application areas of continuously increasing.

Harris Series 100 speaks your kind of language

Fortran IV · Cobol 74 · Basic · Harris Macro Assembler · RPG11
Forgo (Diagnostic) · Snobol 4

In fact, the Harris Series 100 range of five general-purpose, virtual memory computer systems can handle all these languages simultaneously. That makes them ideally suited for use in commercial, scientific and educational roles.

Each of these modular, complete systems is an expanded and more powerful version of the S110, the basic model. In the series which features:

- 98K Bytes of Memory and a Scientific Arithmetic Unit
- System console CRT with keyboard and controller
- 10.8M Byte Cartridge Disc and 9 track, 800 BPI, 46 IPS Magnetic Tape Unit, with associated controllers
- DMA Communications Multiplexer
- Seven language processors, five support libraries

including Total, the renowned Data Base Management System and four RJE and two RBT packages.

A card reader and line printer are standard with all, except the basic system, the S110. To ensure maximum efficiency in every system, the Harris Virtual Memory Manager (VULCAN) comes as part of the overall package.

VULCAN is a comprehensive demand-paging virtual memory operating system with a simple, user-oriented job control language.

With VULCAN each system can operate concurrently in interactive time-sharing, multi-level batch processing and real-time processing modes. And with VULCAN, all seven processing languages and support libraries can be used simultaneously.

The System 120, part of the Harris Series 100 range.

Classic success rules out GEC link

THE success of Modcomp's new Classic 7500 system has ruled out any possibility of major collaboration with GEC, according to Ken Harple, founder and chairman of the Florida-based minimaker.

Modcomp had detailed discussions with GEC late last year which centred on the UK company taking a stake of about one quarter of the shares in Modcomp and, even after the talks were broken off, some kind of collaboration in Europe was envisaged (CW, February 9).

"GEC is now out of the picture altogether," Harple told Computer Weekly in an exclusive interview at the company's Fort Lauderdale headquarters. "Last year our stock price was very low, and we were looking for some kind of insurance in case our figures did not turn round. But our performance since then has been so good that we no longer need any support."

"We anyway discovered a basic cultural problem with GEC."

Harple declined to elaborate on the "cultural" differences, but they may have something to do with GEC managing director Sir Arnold Weinstock's lukewarm feelings towards the computer industry.

New minis are coming shortly in the Classic line, which will ultimately consist of three basic processors. There will be a new powerful processor above the one used in the Classic 7880, and micro-Classic at the bottom of the line. All are 16-bit machines.

"We will begin software development in the UK in the fourth quarter of this year and are also doing final assembly and test of systems there. We plan to begin volume production in the UK in two years' time."

"We chose to site some of the software development in the UK because of the shortage of technical personnel here in the US. We also find that people are much less willing to move around the country than they used to be. The software people we have hired in the UK are very good indeed; they tend to be more disciplined and better than their US counterparts."

'Double your memory'

THE facility from Telefile which enables users of the veteran Univac 1100 to double memory capacity to 512K words, has now been formally announced by the company. First revealed in Computer Weekly (March 20), the package, called Telefile 1100 X-10, adds four additional memory access channels and uses Telefile's T-7005 128K word memory modules.

An unused bit in the Univac memory address is brought into service to provide direct address-

ing of all 512K words without memory mapping.

The hardware is transparent to the OS 1100 operating system, and the Telefile memory, which can be combined with the original Univac memory up to 256K words, takes up one third the floor space and 70% less power, according to the company.

The 1100 X-10 package costs \$440,000 with 256K words of memory, including modifications and installation.

UK, French talks on competing with US

PERIPHERAL and terminal manufacturers in the UK and France are getting together to discuss ways in which they can more effectively compete against the big US and Japanese manufacturers that enjoy far greater economies of scale in their production.

Robin Lingard, head of computer industry policy at the Department of Trade, told Computer Weekly that he is arranging a meeting in Paris in September, some time during the Slob exhibition, between a group of UK peripheral manufacturers and members of the Club de la Péri-Informatique, the French peripheral builders' association.

The meeting is being arranged by Lingard in co-operation with Diell, the French government body which oversees the computer and electronics industries and, according to Lingard, the intention is to discuss areas in which UK and French peripheral builders can "sensibly co-operate."

Lingard pointed out that the Prime Minister and President Giscard decided that computer peripherals should be an area of co-operation between the UK and France when they discussed economic co-operation earlier this year.

Lingard said that a group of UK peripheral manufacturers, including Data Recording Instruments and Data Dynamics, had met at the Department of Trade several times over the last nine months, although no decisions had been made yet about co-operation.

One existing example of Anglo-French co-operation in the peripheral area is that between Data Dynamics and Péri-étrie, which is its French subsidiary, but which enjoys a high level of autonomy.

"Development and production of terminals is divided between the French and UK organisations."

The "official" version of French government intervention in the national computer industry is underlined by the fact that it is published in France by Diell and by the Club de la Péri-Informatique.

For the first time since 1970 the French hardware industry had a balance of trade surplus last year, with hardware and services exports standing at 4,822 million French francs, 5580 million, and imports 0.4% less at 4,598 million francs, 5548 million.

This performance is considerably better than that of the UK, which last year exported about £390 million of hardware but imported almost £700 million. The Club de la Péri-Informatique did particularly well, with combined turnover of members up 28% at £200 million (CW, 16180 million).

Harple... "our performance has been so good that we no longer need any support."

Univac the star at Sperry Rand

AT a time when all the leading US computer manufacturers expect IBM ore reporting major profit surges, several US analysts have singled out Univac for particular attention.

In Sperry Rand's first quarter (April to June), profit rose over 20% to \$45.2 million on turnover up 17% at \$972.5 million. Chairman and chief executive Paul Lyet identified Univac as the star performer with new orders up nearly 25%.

The backlog for the 1100/80, largest machine ever introduced by the company, has tripled over the past year, and according to Lyet, Sperry will be investing a "disproportionate amount" of its research and development budget in the Univac division.

"The computers we are working on for the future will offer as much price-performance improvement over existing computers as today's computers offered over their predecessors," Lyet told the Wall Street Journal.

ROUNDUP

A summary of main news items which have appeared since the last issue of Computer Weekly International.

NEB transatlantic micro venture

KEY features of the plans announced for Innova, the UK National Enterprise Board's venture into the memory and microcomputer market, are an American managing director, semiconductor pioneer Dr Richard Petrizz, and production facilities in the US and possibly the Far East. The corporate HQ will be in the UK. The company will aim directly at the volume world markets that are developing for VLSI microcomputers and storage devices manufactured using N-channel MOS process technology.

PRESIDENT Carter has made it clear that the ban on the export of a Univac 1100 miniframe for the Soviet News Agency, Tass, was an isolated response to the sentences passed on the Soviet dissidents. Tass wants the machine in part to provide message services for journalists during the Moscow Olympics (CW, July 27).

IBM's share of America's worldwide computer base is on the increase, according to an analysis by Advanced Computer Techniques of figures from International Data Corp. IBM's share in 1977 was 71.1%. In 1976, 68% (CW, July 27).

OPEN competition in the provision of all communications services and the ability for common carriers to provide non-telecom services were among the sweeping changes in a legislative proposal on the com-

munications industry introduced into the US House of Representatives in June (CW, July 20).

THE proposed implementation of X25 as the protocol for data network service from AT&T, and a push by the US National Bureau of Standards to enforce a much-criticised standard as the first mandatory US government Federal Information Processing standard, have given further impetus to growing efforts to improve standardisation (CW, July 27).

SOME two dozen US companies, including Time Inc., News Publishing, GE and Western Union, are subscribing to a multi-client study into whether which is being undertaken by UK consultancy Butler Cox, entitled Viewdata and its Potential Impact in the USA (CW, July 20).

PARTS of IBM's VM/370 operating system have been recorded by Amdahl Corp. in order to reduce the overhead imposed by running the large-scale MVS operating system under VM (CW, July 20).

AN average of one school year's gain in reading level was made by several hundred "functionally illiterate" people in the US after only 12 hours' reading training on a Control Data Corp. system using the Basic Skills Learning System. Similar success was also shown in multi-tesching (CW, July 20).

PT7
The other terminal for IBM and ICL mainframes
FERRANTI

INTERNATIONAL NEWS IN BRIEF

£5.5m order for Sweda

A CONTRACT for point-of-sale equipment, signed in the US by the Handy Dan Home Improvement Centres division of Dayline, for Sweda 800/80 Home Centre Systems could be worth £5.5 million over five years.

This figure is based on the planned increase in the number of stores in the chain. The equipment comprises six to 12 Sweda 800 PoS terminals and one System 80 processor per store.

470V/7 for AT&T

FURTHER underlining AT&T's status as a prime Amdahl customer, the Western Electric subsidiary at its Warrenville, Illinois, plant is to get the first Amdahl 470V/7 mainframe later this month. This is claimed to be "considerably more powerful" than IBM's 3033. Also in line for a 470V/7 is American Airlines in Tulsa, Oklahoma, which already has a 470V/6 (CW, January 12).

Japanese outs

FURTHER Japanese tariff cuts on imported computers are in the wind, following heavy US and European pressure on the Japanese government to reduce its enormous balance of trade surplus. At last week's Bonn summit, the Japanese proposed reductions of 7% on CPUs and 10.5% on peripherals. In negotiations, they appear to have offered 4.9% and 6% respectively.

Space debut

PROBABLY the first batch of semiconductor material ever to be man-made in space has been produced by Vladimir Kovalev, and Alexander Ivanchenkov, cosmonauts in the Russian Salyut 6 space laboratory. Such manufacture in space is of considerable long-term importance, for zero gravity produces much better crystal orientation in silicon, leading to potentially higher production yields and performance of devices.

\$500,000 order

A \$500,000 order for the Plessey 4880 telex and low-speed data system has been awarded to Plessey Controls of Poole by the Government of Brunei.

Fujitsu announces a new range of minis

MANUFACTURING of Fujitsu VO-3 office computers in Spain is now under way and the plant, in Malaga, currently has necessities for 26 VO-3s, called Series 30 in Spain. Once its permanent plant is finished, before the end of the year, manufacture will be at 100 units a year. The company building the Series 30, Secunia, is 28% owned by Fujitsu. Meanwhile in Japan Fujitsu has announced a new range of minicomputers, the Pnnfcom U-1000 series, which replaces the ageing U-100 line. Models announced were the PFU-1500, with up to 11 Megaword of main memory, the PFU-1300 and the PFU-1100. The 1100 comes with 16 or 32K words. The general purpose minicomputers are expected to be widely used as concentrators in Fujitsu Network Architecture systems, and as successors to much more flexible than IBM's 3790, which performs a similar role in SNA, and much richer in software than IBM's Series 1, which is now being used in some SNA networks.

Longways available on the U-1000 line include Cobol, Fortran, Basic, a Macro-assembler and Munip, the interactive data management language.

Longways available on the U-1000 line include Cobol, Fortran, Basic, a Macro-assembler and Munip, the interactive data management language.

Australian company wins more contracts from IBM users

DPCE general manager Max Eastwell... "office in Italy within the next 12 months."

THE Australian firm that hit the headlines early in 1978 when it took over the maintenance of all British Airways' IBM systems, Data Processing Customer Engineering, is now starting to pick up maintenance contracts from other IBM users in the UK and is looking seriously at Italy and Ireland as the next two European countries in which to set up business.

Apart from British Airways, DPCE now has six other clients, all within easy distance of Heathrow where the main BA computer installation and the majority of DPCE's staff are located, but DPCE's general manager, Max Eastwell, told Computer Weekly that he was interested in picking up contracts in the Midlands and North of England, even if they were small installations, provided they had what he called "growth prospects."

Eastwell said that DPCE would probably open an office in Italy within the next 12 months, with Milan as the most likely location, adding that Italy was the most promising of all the other major European countries for DPCE because of the level of dissatisfaction there with

maintenance provided by systems suppliers.

Eastwell pointed out that Singapore and Hong Kong were two locations where DPCE was definitely setting up shop this year and that DPCE already had confirmed big customers in both places in the same way that it secured the BA contract before moving into the UK.

Now that DPCE is firmly established at BA, its contract with the airline has been extended for another five years from September at a value of about £4 million at current charges.

The six other customers now serviced in the UK by DPCE include Jaserve, a bureau based at Frimley Green, Surrey, the London-based Tempo Computer Services which provides service to the advertising industry and the Meteorological Office at Bracknell, Berks, where DPCE maintains the add-on memory on the 370/185 installed there.

DPCE employs 43 people at the moment in the UK including 27 customer engineers, and about 100 worldwide, most of the others being in Australia where DPCE's customer line-up includes Qantas.

EEC non-committal on jobs

AN Irish member of the European Parliament, Patrick Power (Fianna Fail), worried about the effects of new technology on employment, has asked the European Commission for its views — and has received a non-committal answer.

The Commission pointed out that new technology creates new jobs as well as destroying old ones, but it does require a more mobile and adaptable workforce.

The Commission provides aid for retraining from the European Social Fund.

Many studies have been undertaken by the Commission, it said, on future employment, and the forecasts indicate that the slowdown in growth of the population in 1985 to 1990 should help to relieve the pressure on employment.

Honeywell retaliates

ADVERTISING worth \$400,000 scheduled to be run in the US magazine Business Week has been cancelled by Honeywell, following an article that the company felt was "hostile." The article expressed scepticism about Honeywell's business prospects.

A Honeywell spokesman said: "An advertiser runs his advertising in a supportive atmosphere or, at the very least, a neutral atmosphere, not a hostile one."

UK manufacture of Apple II personal computers

MANUFACTURE of Apple II personal computers for the European market will take place in the UK under an agreement between ITT and Apple Computer.

The licensing agreement specifies purchase of sub-systems and peripherals from Apple, and both companies have

agreed to a free exchange of software.

ITT intends to concentrate on small business applications in the future.

ITT already sells complete systems from Apple, and the manufacturing licence has been under negotiation for several months (CW, May 18).

German defence university installs Univac 1100/21

A NEW German university run by the defence forces has installed a 1100/21 mainframe computer from Univac. The machine, serving 45 Unilapex 100 display terminals, 17 matrix printers and five graphics terminals, will support studies in mechanical engineering, elec-

tronics, teaching, management and general administration. The university, in Hamburg, resulted from a proposal by Haimut Schmidt, the West German Chancellor, to improve the development and culture of the defence forces. The first buildings were ready in 1976.

Plessey for French chain

FRENCH supermarket chain Minifix SA and its purchasing organisation Socem, at Lendres, Northern France, have installed a Plessey 1480 portable data capture system for stock control.

A total of 17 supermarkets and hypermarkets will be equipped with the system, which features a light pen and cassette recorder.

Germans introduce a low-cost version of the Dietz mini

A LOW-COST packaged version of the Dietz 621 mini has been introduced in Germany aimed at the scientific, engineering and educational markets.

Consisting of a 621 X1 processor with 16K or 24K words of memory, two 256K byte floppy disc drives, a 1,920 character display and a 200 chps printer, the system, designated 621 CXT, costs Dm 67,500.

Dietz says that the system, which is built into a large work-bench, is suitable for first-time users and can be built up into a much larger system.

The operating system used is the Dietz XOS, and complies

offered include Fortran IV, Basic, and C-Basic, together with an editor and other utilities.

Boycott by 500 scientists

A GROUP of 500 US scientists have agreed to stop all personal co-operation with the Soviet Union in protest against the imprisonment of the dissidents Scharansky and Orlov.

Malcolm Derrick, physicist at Argonne National Laboratories, announced this when greeting Scharansky's wife Avital when she arrived at Chicago Airport.

CII-HB in Indian link-up

FRANCO-AMERICAN mainframe manufacturer CII-Honeywell Bull is planning a collaborative computer marketing venture in India following the finding of a suitable partner. The plan, which is being fostered by the French government, is likely to involve manufacturing there.

CII-Honeywell Bull was originally involved in the Indo-EEC initiative on joint computer projects, but later withdrew to pursue an independent approach (CW, January 12).

\$5m terminals

THE Swiss PTT has ordered terminal systems worth \$5.25 million from Thomson CSF of France for use in its TERCO computerized telephone information system based at Lucerne.

Significant material is discarded

I AM writing in reply to Mr Simpson, Mr Andrew and Ms Raimon (Letters, July 20). Naturally they defend the contributions of the Science Museum, Edinburgh and Birmingham museums. I had not intended to give the impression that the Science Museum was the sole centre of historical work in computing. This was an unfortunate and accidental ellipsis for which I apologise. My criticism was not meant to refer to the historical collections but the amount of space available for showing these to the public.

Two reasons were given for the fact that industry often discards significant material. Firstly, that such material was already in collections and not wanted; secondly, that industry did not think to offer hardware to museums. My strong impression is that the latter is often the case. Perhaps a more public and positive approach by the museums to the industry as a whole may get a better response.

The letter in reply to my original provides excellent indirect support for the idea of a national computing museum. The authors write: "Between us we preserve a very wide range of machines." This suggests that individually in some areas they are deficient as I originally suggested.

When I take my pupils to one of these institutions it is of little use educationally for me to tell them that a particular significant piece of hardware is several hundred miles away, or in the store of the museum I am using. If the function of museums is seen primarily or exclusively as providing simply facilities for "historians and

LETTERS

scholars" then this geographical separation may be acceptable as may limited public viewing facilities. It is worse than useless for educational purposes. Society is going through a revolution as far-reaching as the Industrial Revolution. The computer is as important for this era as the steam engine in the earlier era. If people are to understand the new society, a major educational task lies ahead. For this the work of the museums is vital.

The historical and educational task can, I believe, only be supported by a large-scale national centre for the history of computing and information technology at which visitors, the general public, schoolchildren and students could gain a comprehensive overview of the technology which is revolutionising their lives.

Harpenden
Heris.

JOHN COOKSON

No suitable premises

I WAS surprised to see it reported that the manufacturing director of Data Recording Equipment said that "in Creve the problem was a shortage of modern property" for the expansion which his company wishes to undertake (CW, July 13).

As a borough councillor I cannot let that go unchallenged. He must know that there is a very significant development at Creve Gate Farm which includes units ranging from 2,000 to 40,000 sq ft, all becoming available over the next few months, and if he does not know that the rentals and leasing arrangements which the council provides are as competitive as any in the country then he has chosen to ignore the information he must have been given.

It is no more than two years since I met many of the DRE management who expressed great confidence in Creve and satisfaction that the council's plans were most suitable for them. It is a pity that your article creates such a false impression.

P.A. KENT

Borough of Creve and Nantwich
The article by no means created a false impression and David Deon was correctly quoted. No premises at present available or planned are suitable for DRE's purpose. However, the company confirms that it is still eager to find a suitable site in the Creve area where it can develop an integrated manufacturing plant to house its overall operations. — ED1-TOR.

New electronic games

THE manufacture of the Chess Challenger machine reviewed earlier (CW, December 8, 1977), has produced two new electronic games.

One, called Checker Challenger, can be set to four alternative levels of play. If he knows how, the user can also invoke a fifth level, harder than the others. Presumably it was at this level that it qualified as the makers tell us, for membership of the American Checker Federation. It is available from the large stores at £98.95.

The other new device, the Electronic Chessboard Tutor, costs £45. It does not play chess, but allows the user to take himself through a course of programmed instruction, in which the teddy bear is lightened by making his trial move on an actual chess-board, which magnetically senses the piece placed upon it.

For a given lesson, the appropriately punched instruction card is slotted into the device, so as to lie between the surface of the board and the sensing elements and micro-circuitry of the interior. If one of the holes in the card lies somewhere under a

square, then a piece placed on that square is sensed. By ingenuity in placing the holes it is possible to step through a series of chess positions, each time cranking the card onwards a stage by winding a toothed wheel. The device "knows" at each stage whether the pupil's trial move corresponds to the recorded as correct in the current frame of the sequence. If it does, then a yellow light shows. If not, he can try again or take a "hint". The latter consists in merely lifting the chosen piece with a certain key depressed, and getting either a red (wrong) or green (right) signal. The user can thus gain partial information, so that that piece must be moved somewhere, without being told where.

This is probably the most useful feature, together with an "asterisk" signal which gives a hint of a different kind, namely that the move in question is important.

At any stage, the user can either the answer by pressing another button. A mini-textbook accompanies the set and helps steer the pupil through the lessons.

Even in its present form, the

TO convert Chess 4.6 into Chess 4.7, a "transposition table" has been added whereby the program saves itself duplication of effort when growing its look-ahead tree. In chess, variations of possible lines of play not only branch out from each position, they can also converge to again arriving at the same position via numerous different move sequences. An automatic memory for previous occurrences of the same position saves the program from re-sprouting replicas of the same sub-trees over and over again in different parts of the same search. The transposition table, implemented by efficient use of hash-coding techniques, provides the needed rote-memory.

In the opening and middle game the table is handy, but not of large effect. This is because the branching-out of lines greatly preponderates over convergence. Consequently only small improvements of search effectiveness are gained.

With end-game situations the story is different. Here the size of the space to be searched may become so cramped that reconvergence begins to dominate.

In the position shown, White must choose a move. Forward analysis in this case contains mainly King moves, so that an estimated branching ratio of about ten alternatives per move for each side seems fair. Moreover each King has only about 20 attainable squares he can legally stand on, and White's Bishop has less than 30 potential stations. In all, Pawn captures, insofar as they can be engineered at all, belong to the more remote future.

During the considerable look-ahead span over which the interlocked pawns can be relied on to remain fixed, the possible King-Bishop configurations according to number less than 20 x 20 x 30, or 10,000 in round figures. This is a small number relative to the search capacity of the program, so reconvergence of lines will plainly be the dominant feature of the look-ahead search. The benefit derivable from the transposition table is correspondingly large. When the search has saturated possible configurations within this limited horizon, time and resources remain for pushing a few explo-

Electronic Chessboard Tutor is expected to sell. But the tutorial material is sketchy and the device itself has a number of drawbacks. Most people would prefer real pieces to counters painted with symbols. The text on the program cards has a quaint flavour, suggesting translation from French—borne out by the labelling of file "e" in the diagram with the symbol "e". The instructions for slotting the program into the machine do not correspond to lessons 1 and 2 with what you have to do, and in my hands the tooth wheel for stepping the card on a stage had a nasty habit of slipping. Also, the green light showed on some occasions when it should have been red.

On the other hand, viewed as a port of things to come, the kit is interesting. I want Merz 2 and its successors. Perhaps in 2001 AD those parts of the die and week not occupied with the latest game-playing and instructional device will see us feverently engaged in the design and development of new electronic amusement. I can imagine worse fates — and also better ones.

CHESSLAB

By Donald Michie

Tension in the computer chess community is rising as the August 31 deadline draws nearer in the £1,250 wager between David Levy and four computer scientists. The bet struck in August 1988, was that Levy would not lose a match to a computer chess program within 10 years.

At the end of last month, a match was cancelled at the last minute between Levy in London and Chess 4.7, an upgraded version of the world computer chess champion Chess 4.8, on a CDC Cyber 176 in Minneapolis. Levy will now play Chess 4.7 in Phoenix.

Win or lose—much interesting work

WHITE TO MOVE. Because of the blocked pawn formations and few pieces, use of a "transposition table" to prevent redundant calculations greatly extends the depth of forward search.

royalty lines really deeply (in the example shown, the line concerned with forcing the White King through the pawn gap is the obvious candidate).

Chess 4.7 recently defeated Grandmaster Browne in a simultaneous exhibition (CW, June 22). The game lasted into the late end-game, where pro-

gram performance was materially aided by use of the transposition table.

It is not fitting for me, as an interested party, to predict how Levy will fare in the flurry of matches in Phoenix, Arizona, and Toronto, which will take place shortly. The deadline for his wager made in August 1988, that he would be unbeaten by computer for 10 years, expires on August 31 (or if a challenge match happens to be in progress on that date, then at the close of the said match). By then either he will have collected £1,250, or I and my wager colleagues will have relieved him of a like sum. Win or lose, much interesting work, and some exciting moments, will have been generated. So even an adverse outcome would not leave me disconsolate.

A side-bet, however, does give me pain. I wagered an additional £500 that, if Levy loses, it will be to a program developed under my direction. Alas, that was in the days when I could still

freshly remember having a laboratory staffed and funded on a reasonable scale.

These things did not return. It would be nice to think that lack of laboratory resources is a blessing in disguise. To my eye the disguise remains impenetrable. I avert them towards the interesting contests of this month.

In the first of these, at Phoenix, Arizona, Levy will again play Chess 4.7. There will be a \$5,000 prize for the winner and a \$1,000 consolation for the loser. Presumably a drawn match will give them \$3,000 each.

The second match (assuming Levy survives the first) will be in Toronto in association with the Canadian national exhibition. Levy's opponent will be Chess 5.0, which David Slate is ready to complete at this moment. By that time I should imagine that Levy will accurately care whether he wins or loses as he has negotiated a "performing fee" of \$10,000, irrespective of outcome.

Sicob PARIS

281,687 visitors from 112 countries studied the office materials and data processing equipment presented by 1,755 firms of 31 countries at Sicob 1977.

James Miller & Partners Ltd.

DATA PROCESSING MANAGER Edinburgh

The Miller Group, with wide interests in construction and development, wish to appoint a Data Processing Manager. The successful candidate, male or female, will be required to develop and establish existing and new applications leading to the implementation of the programme of expansion already embarked upon.

This post requires applicants to have:—

- * a practical appreciation of the construction industry with experience of relevant commercial and technical computer applications
 - * a sound knowledge of IBM System 3 hardware
 - * experience of on-line and communication systems
 - * minimum of 3 years successful managerial experience
 - * ability to communicate effectively at all levels
- Initial salary by negotiation with excellent conditions and fringe benefits of an established and progressive Group. Please write, giving details of your career, to:—

Group Personnel Manager,
James Miller & Partners Ltd.,
Miller House,
18 South Groethill Avenue,
Edinburgh EH4 2LW.

The Appleton Laboratory has a vacancy for a

SENIOR PROGRAMMER

to join the Central Computer Services Group

The person appointed will take charge of a small team of programmes and will be responsible for the provision of applications and systems programming support throughout the Laboratory.

The Computer Centre operates a large ICL 1904S configuration, and has recently acquired a GEC 4070 Computer which is linked to the SRC's central computing facilities at Chilton. The major work of the Centre is to support the SRC's Space Research Programme, involving close collaboration with Universities, but in addition the Centre provides a service for the Laboratory's own Research Programme in Atmospheric Science and Radio Communications.

The successful candidate will be a science, maths or engineering graduate with a good background in computer science or numerical methods. A knowledge of the GEORGE 3 operating system would be an advantage.

The vacancy is at HIGHER SCIENTIFIC OFFICER level and the salary will be on the scale £4,101 to £5,448 p.a., the exact step depending on qualifications and experience. In addition there is an Outer London Weighting Allowance of £275 p.a.

Non-contributory pension scheme.
Please request an application form from:

The Secretary
SCIENCE RESEARCH COUNCIL
Appleton Laboratory
Ditton Park
Slough, SL3 9JX
Tel. Slough 44234, Ext. 153

Closing date: August 24, 1978

UNIVERSITY OF ALFORD
COMPUTING LABORATORY
Appointments are invited for two senior posts in the User Services Section of the Computing Laboratory.

ASSISTANT DIRECTOR
(Head of User Services)
CL 78/OW 67074-15720

SENIOR
COMPUTING OFFICER
(User Services)
CL 78/OW 67074-17355

The group is responsible for the provision of applications and systems programming support to the Laboratory. Applicants for both posts should have a good honours degree and several years' experience in an area of computing relevant to the work of the section.

Further particulars and application forms may be obtained from the Secretary, Computing Laboratory, University of Alford, Alford, Leicestershire, LE12 5JF, and should be returned by 21 August 1978, enclosing appropriate references.

COMPUTER ENGINEERS

FOR THE WEST COUNTRY

Western Accounting Systems — A rapidly expanding computer sales company require experienced field service engineers able to repair to chip level and maintain their range of Dac based Mini Computers at customers' installations around the West Country. If you feel that you have the sort of experience which we are looking for then please contact either Richard George or Roger Ford on 0934 415398 or write to:

WESTERN ACCOUNTING SYSTEMS LTD
4 Villalons Road
Weston-super-Mare, Avon

Chief Programmer

Starting salary up to £7000 p.a.

West London

Over the past twenty years, our client has successfully maintained a reputable position in the building industry.

They are now looking towards the future and the computer facilities required to meet the ever-increasing demands of the Group.

To date, they have developed a number of on-line systems using 3270 equipment and they are now at the early stages of extending their facilities further into on-line development and engineering systems.

In addition to the TP network, their facilities include

- ★ Timesharing
- ★ TOTAL Database (under investigation)
- ★ On-line Program Development techniques

New areas of hardware are also under investigation, such as graphics display systems and Series/1.

These expansion plans have created a vacancy for a Chief Programmer who can lead and motivate a team of c10 programmers.

Apart from possessing leadership qualities you must have a strong COBOL background and the ability to influence program design, advise and implement standards, set schedules for program development and control the programming operation to ensure deadlines are met.

If you feel you can meet the above requirements, please contact Marilyn Black, quoting Ref: 1824/CW.

MYTH SHATTERING NEWS FROM CAP-CPP

In the computer world things move fast. So fast that many people have to form opinions quickly. Sometimes those opinions are based not on fact but on myth. Maybe you have the wrong idea about CAP-CPP.

We believe CAP-CPP leads the world in software for new computing technologies, as well as being an established leader in more traditional computing skills.

"MYTH"

A software house like CAP-CPP cannot offer me a future, the way computing is going.
For 16 years CAP-CPP has grown and made regular profits. During this time we have built a considerable expertise in many areas of computing. Next year we will spend nearly £4 million on staff courses and training to ensure that our staff stay ahead of the market in their skills.

**BASIC SOFTWARE/INDUSTRIAL
CONTROL PROGRAMMERS/DESIGNERS**
READING: £4,400 to £6,250

Practical experience of computers, operating systems and communications software is needed. Knowledge of PDP11 software and COBOL would be of particular interest. Ref. No: 1156CW

BUSINESS ANALYSTS
LONDON/READING/MANCHESTER
TO £7,500 + BONUS

At least 4 years experience in business and commercial systems involving a variety of applications is essential. The ability to liaise with clients in a pre and post sales advisory role is expected. Typical experience would cover accounting, order processing and stock control systems. Ref. No: 1157CW

"MYTH"

CAP-CPP specialises in large banking and insurance projects on large mainframes.
The major portion of our work is now in the small business systems field using minis and micros but often for large clients. Our staff work closely with a number of mini and micro manufacturers, as well as in the traditional areas of mainframe computing.

COMMERCIAL PROGRAMMERS
LONDON/READING/MANCHESTER
£4,400 to £6,250

Experience of batch or on-line commercial systems is required. PL/1, RPL/2, COBOL or Assembler experience would be useful. Team leading experience would be an advantage. Ref. No: 1158CW

PROJECT MANAGERS
READING & MANCHESTER
TO £8,250 + BONUS

5 or more years experience in commercial or technical projects with at least a year in a project leading role. Staff applicants who have the ability to attend to administrative detail coupled with a keen interest in remaining involved with the technical aspect of computing. Ref. No: 1159CW

"MYTH"

CAP-CPP only recruit people with lots of experience.
The majority of our recruits are new graduates who join as trainee programmers. However we are always interested in recruiting staff with limited experience as well as those who have reached senior levels, who want to develop their careers in a company whose future and prime interest is computing.

ON-LINE SYSTEMS DESIGNERS
LONDON/READING/MANCHESTER
£4,400 to £6,250

Our systems include the use of a wide range of equipment including DEC, IBM, ICL, Zilog, Intel, Motorola and Burroughs. The range of software used is even greater and applications areas include warehousing, process and stock control. Ref. No: 1160CW

CONSULTANTS
LONDON/READING
TO £8,250 + BONUS

Involves organisational reviews, feasibility studies, equipment selection, producing systems development plans and requires a developed ability to deal directly with senior management. At least 5 years of experience is required. Ref. No: 1161CW

"MYTH"

A software house like CAP-CPP wouldn't be interested in me.
Our range of work over the expanding technological field that computing now represents is enormous. We do want to hear from people at all experience levels who would like to be part of a company which intends to stay at the top.

BENEFITS

A well established career development plan. At least 2 weeks holiday, sick pay scheme, group sickness insurance and share purchase facilities. Senior staff are eligible for an annual bonus based on profits. Removal assistance is available where appropriate and we will arrange local interviews where possible.

To apply, complete and send the coupon, quoting the relevant reference number, to:-

NEW TECHNICAL SUPPORT POSITIONS IN OUR PROFESSIONAL SERVICES DIVISION

Our Professional Services Division provides a wide range of consulting services to Industry, Commerce and Government — both independently and in support of our Systems and Data Services divisions. These new positions arise in expansion of our technical support group involved in pre- and post-sales assignments.

WHO IS CONTROL DATA?

WE are a computer company employing 11,000 people worldwide.

WE have a firm commitment to the computer industry, the United Kingdom and the training and advancement of people.

WE are a world leader in the provision of computer services, large-scale computers and peripheral equipment. This position is continually strengthened by our ongoing investment into more advanced products and services. Such a range of activities presents considerable scope for the advancement of personnel at all levels and disciplines.

WE offer a challenging and rewarding career opportunity with involvement in software development, installation and support, together with some sales-related activities in the areas of system configuration and benchmarking.

WE are looking for technical people at the highest salary and offer salaries and associated benefits commensurate with the demands of the post. If you have the qualities and experience we are seeking — please read on.

Please write to Mrs. Margaret Spence with full details of your career to date. Professional Services Division, Control Data Ltd., 22a St. James's Square, London, S.W.1. Telephone 01-930 7344.

MORE THAN A COMPUTER COMPANY

USER SUPPORT PROGRAMMER

The Daresbury Laboratory, located in the Cheshire countryside, is developing major national facilities for research into atomic, molecular, solid state and nuclear physics. Exploitation of these facilities requires first-class computing support. Computers at the Laboratory include an IBM 370/185, GEC 4070's, POP-11's and Interdata's.

We are looking for young people, male or female, to fill vacancies in the User Support Group which is responsible for providing general support for users of our computing facilities. Previous experience of computing whilst advantageous is not essential as training will be provided.

Appointment will be made at one of two levels:

(a) Assistant Scientific Officer — applicants under the age of 27 should possess GCE 'O' level, or CSE Grade 1, passes in at least 4 subjects including English Language, or Literature, and Maths or Physics. However applicants with 'A' levels would be preferred.

Salary: fixed according to age, on the following scale: £1,776 to £3,203. Examples of starting salaries are £1,776 at age 16; £2,938 at age 18; £2,731 at age 22 or over. Older candidates may receive additional increments if they have previous relevant experience.

(b) Scientific Officer — applicants should possess a good honours degree in a relevant subject.

Salary: fixed according to qualifications and experience on the following scale: £2,838 to £4,151.

There is a generous leave allowance and a non-contributory pension scheme for both grades. The Laboratory also operates a flexible working hours scheme.

Closing date: 18th August 1978.

Application forms can be obtained by telephoning Warrington 85000 ext. 447 or writing, quoting reference number DL/836/BV, to:

The Personnel Officer

DARESBUURY LABORATORY
Science Research Council
Daresbury, Warrington WA4 4AD

SENIOR TIMESHARING SALESMEN (Manager Designate)

MANCHESTER

BASE SALARY to £6,500 plus Commission and Commission accelerator plus Company Car

Our Clients are a highly successful timesharing organisation whose commitment to commercial applications and customer training has ensured their success within the United Kingdom. They are now expanding their client base in the North of England from a Manchester location. They offer a full range of timesharing packages with particular specialisation and success in the area of Database management.

This represents an excellent opportunity for a Salesman with a proven track record within the industry to head the Manchester operation. The responsibilities of this Manager Designate will grow with proven results.

Excellent technical and marketing support will be given to the successful candidate and other benefits include Company car (all mileage paid), training in the United States, excellent commission accelerator, BUPA and life assurance.

We're switched on — are you?

The brand new multi-million pound, purpose-built Data Centre of BL Cars is one of the most advanced computer technology centres in the world and utilises a sophisticated microwave network carrying traffic between 48 locations. The first part of the project has been completed to schedule and the second phase, to transfer all existing IBM mainframes within the company must be finalised by the end of this year.

To enable future implementation dates to be met the following professional operations personnel are required:

Shift Leaders Senior Computer Operators Computer Operators

Ideally you will have experience in at least three of the following: DOS/VS, VS11, HASP, MVS, TSO, IMS or CICS. More important you should also have a genuine interest in computing as a career and not just be a button pusher.

Benefits are those you would expect of a major company and include salary up to £5,700 including shift allowances, 5 weeks' holiday, pension/life assurance and sick pay schemes and substantial discount on BL Cars and accessories. Generous relocation assistance will be provided as necessary to this pleasant rural area where housing is favourably priced.

So, if you are looking to develop your career in an exciting environment, using advanced technology and the idea of internal and external training appeals to you, ring Rod Watts on Redditch (0527) 28515 or alternatively write for an application form to:

Operations Manager, BL Cars Limited, Data Centre, PO Box 5, Redditch, Worcs.

UNIVERSITY OF SURREY COMPUTING UNIT

SENIOR COMPUTER OPERATOR

Up to £4121
(plus pay award pending)

Six week's annual leave. Excellent sports facilities and social amenities. Very pleasant surroundings on University campus.

We need a young (but reasonably experienced) operator, with the ability and confidence to take charge of our computer room when the Shift Leader is absent. We have several computers — mainframe and minis. There is an unusually wide variety of job mix — scientific and data processing — batch and real-time. Three shifts, five day week.

For further details, or to arrange an informal visit to the Computing Unit, please telephone Miss A. MacDougall, Secretary to the Operations Manager, on Guildford 71281 ext. 470/488.

For an application form, write to the Staff Officer, University of Surrey, Guildford, Surrey GU2 5XH, or telephone Guildford 71281 ext. 462.

Systems Analysts

Starting salary up to £7000 p.a.

The construction industry offers a unique opportunity to develop systems in areas which are relatively unexplored to computerisation.

Could you:

— design a system to estimate the cost of a multi-million pound building project.

— integrate into that system, a project control system to ensure outputs and costs are effectively controlled.

— integrate resource scheduling to maximise on-site profits.

These are just a few of the many areas our client wishes to computerise to ensure continued competitiveness and success in the 1980's.

Their current computing needs are met by:

- ★ IBM mainframe
- ★ TP network based around 3270
- ★ Timesharing
- ★ TOTAL Database (under investigation)
- ★ On-line program development techniques

If you have a proven track record of systems design and implementation, the ability to lead a project and communicate at senior management level, then you would find this a very exciting environment in which to work.

Our client is based in North West London and offers a bonus system, free BUPA membership and Life Assurance, 4 weeks' holiday. Ref: 1825/CW.

Please contact Marilyn Black.

GOLDSMITH RECRUITMENT INTERNATIONAL

Where to lay hands on the most exciting software work for experienced people

Just for a moment don't worry who you are or what our business is.

If you've developed noteworthy experience as a software professional you'll have covered quite a wide range of applications. Financial packages, management information, stock control, payroll, will all have grown under your touch. So where do you go from here?

We don't operate in any of those areas. We produce highly sophisticated electronic systems, each of which needs specialist computers and software packages.

Don't think for a moment that you can't handle it. The transition from commercial to a technological based environment is possible with the added rewards of greatly increased job interest and a personal involvement with a real-time on-line system.

Quite a few people have done it before you, and one of them has this to say: "... Our department can offer a more complete spectrum of work than any other company. Mini computer, micro computer, application packages, standard software, compilers, operating systems, techniques and specialisms. The disciplines involved ... the career development ... the potentiality for fine management ... all contribute to a good career."

The only way to find out just how exciting this work is, and how rewarding, is to contact us.

Please write immediately to D. C. J. Wetkine, Software Manager, Marconi Radar Systems Limited, Freepost Chelmsford, CM1 3BR, Essex. (no stamp required) Tel: Chelmsford (0245) 67111.

You'll have a say in the definition of complete systems. You'll work through each project from design to on-line testing, and liaise with customers to determine their exact requirements. Since the systems are central to the product itself, you'll rub shoulders with specialists from other technical fields and gain an understanding of their activities. We're talking about very advanced projects, with sophisticated fail safe and standby facilities, rapid response times and modern man machine interfaces.

Senior Analyst/Programmers

with five years software experience,

Consultants

with eight years programming and analysis experience.

Salaries will be commensurate with qualifications and experience and will be competitive.

All positions are open to men and women.

The Wellcome Foundation Limited is a major British-owned international pharmaceutical company. We have recently completed our new, purpose-built Computer Centre and acquired a new configuration, comprising of an IBM 370/145 and 370/148.

We now wish to further strengthen and enlarge our present operating staff and can offer attractive opportunities on a 5-day week - 2-shift system (8 am-4 pm/4 pm-midnight), i.e.

Senior Operator

c £5000 inc. Shift Allowance

to lead a team of operators. Candidates should have at least 2 years' experience using OS/VS1 or MFT. Experience on OS/VS1 JCL would be a distinct advantage. REF FY/754/1

Operator

c £4200 inc. Shift Allowance

Candidates should have at least 12 months' experience using OS/VS1 or MFT. REF FY/754/2

For both posts, a good working knowledge of VM/370 and/or IMS would be desirable but not essential as comprehensive training will be given, where necessary. Prospects for career development within the Computer Division and other functions of the company are excellent. First-class benefits include generous assistance with relocation expenses, where appropriate.

Computer Programmer

Letraset International have recently installed a POP-11/34 mini-computer, providing computer facilities for UK operating centres based in Central London and Ashford, Kent.

Current developments are in both manufacturing and financial areas within the company. The successful candidate will join a small team providing commercial systems and programming support to these operational centres.

Applicants should be capable of working with a minimum of supervision and be educated to at least 'A' level. Eighteen months' experience of BASIC PLUS programming is essential and a knowledge of R.S.T.S. is desirable.

The company offers above-average terms and conditions of employment including 4 weeks' holiday and a 44-day week.

For an application form, please contact Peter Meier, Personnel Officer, LETRASET INTERNATIONAL LIMITED, Kingsnorth Industrial Estate, Ashford, Kent. Tel: Ashford (0333) 24421.

Letraset

University College Hospital Intermediate Systems Designer/Programmer

To lead a small team working on the expanding Pathology data management and on-line acquisition system, and the design and implementation of a Haematology Laboratory system.

The system is on a C.T.L. Modular One computer with backing store. The job offers considerable scope for experience in design, programming and implementing a computer system in a real time environment. The successful applicant will be expected to adopt a disciplined professional approach, and must be used to working to time schedules.

Applicants should have at least 3 years' experience in computing. A knowledge of Modular One, Coral 66 or Medical Computing would also be advantageous. Salary including London weighting £5,315 - £6,476.

Application forms and further information can be obtained from Personnel Department, University College Hospital, Gower Street, London WC1E 6AU. Tel: 01-278 9900, Ext. 381, quoting Ref. CW/140/DP. Closing date 19th August 1978.

SENIOR SYSTEMS ANALYST

Worcester/Birmingham

Redman Heenan International is an engineering Group of some 18 Companies and £30m turnover and a performance record showing improvement each year since 1971. They are currently restructuring and expanding their Group D.P. Service and seek a Senior Systems Analyst.

He will identify systems needs in the manufacturing and engineering activities, and develop and implement systems as required. He will control a systems team of analysts and programmers and will report directly to the Group D.P. Manager.

He must have in-depth experience of designing systems for manufacturing control applications and some programming experience (preferably COBOL and RPG). He will be analytical in diagnosis; imaginative in solution. Critical factors are technical ability and the personality to achieve results. Age is flexible. An attractive remuneration package will be offered.

Please telephone N.F. Churchill, Executive Resources Ltd., City Centre House, Union Street, Birmingham B2 4SR. 021-643 6071.

CANADA

PROGRAMMER/ANALYST

£8,000 to £10,000

We are the Canadian Division of a multi-national textile company with its head office in the U.K. We are seeking a high calibre individual to participate at a senior level in the development of real time systems using an ICL 2904 computer.

Applications are invited from candidates who are experienced in the following areas:

- * Solid ICL programming experience using COBOL
- * Experience in programming real-time systems
- * A sound knowledge of ICL software, and in particular TPS on-line software

The successful candidate will be a self-motivated individual capable of dealing with the complexities of real-time systems, and able to communicate effectively with User Departments. Applicants should be ambitious and display the potential management skills that would ultimately lead to promotion.

We offer an attractive staff benefits package and relocation assistance will be given.

Please apply giving full details of experience to:

B. M. Loftus, D.P. Manager
J. & P. Coats (Canada) Limited/Limtee
P.O. Box 519, Station "A", Montreal, Quebec, H1V 2B8, Canada

CHUBB ELECTRONICS LTD. GRADUATE TRAINEE

A graduate recently qualified in Engineering with Electronic or Computer Science bles, is required to work with our team on integrated security, fire, and environmental control systems. Training will be offered in Systems Engineering, Project Management, and Commercial Systems.

An attractive salary package will be negotiated. Please write with full details to: MARILYN DAVIDSON, COMBYTE SERVICES LTD., SUITE 74-78, 12-13 HENRIETTA STREET, LONDON WC2E 8LH, or phone 01-240 3223.

HERIOT-WATT UNIVERSITY DEPARTMENT OF MECHANICAL ENGINEERING DEPARTMENTAL COMPUTING OFFICER

The person appointed will be required to perform a range of duties serving the department's computing interests. The duties will include collection and submission of software for micro-computer, job control language applications, and assistance in programming for main frame computers, surveillance of departmental computing equipment.

Applicants should hold a degree in Science, Mathematics or Engineering, or equivalent qualifications, together with appropriate working experience. Starting salary will be in the range £3800 to £5170 a year according to qualifications and experience. Please send for application form to the Staff Officer, Heriot-Watt University, Edinburgh, which will be returned by 31st August 1978.

CONTRACTS

At least 2 years' OPERATIONS experience?

If you are a freelance operator now, or intend to go freelance in the near future, contact us for details of our current and future assignments in all areas of the U.K.

The ability to communicate and an intelligent attitude towards freelance work is considered essential.

Operators/Senior Operators
Stratford E15, up to £4,850,+substantial benefits

When you're looking for the best...

You undoubtedly share more with
Morgan Guaranty than you realise.
For instance, like us, you're look-
ing for the best. Like us, you prob-
ably also realise that it pays to be better.

So, that's why we give a starting salary of up to
£4,850 a year with an annual bonus of up to 6%,
rising to as high as 15%, mortgage facilities at 3%
interest rate, a subsidised staff restaurant and a
series of excellent additional benefits.

As an international Corporate Bank with an outstand-
ing reputation, you could hardly find
better career prospects than those
available at our UK Data Centre in
Stratford. Our modern building is only
a minute away from the tube station
and has terminal and there is ample
free parking for those with their own
cars.

Our equipment is also likely to be better
than the hardware you're currently
using. An IBM 370/138 and 370/135
(with a 370/148 on the way) means you
should have experience of DOS/Vs
and preferably either POWER/Vs or
CICS/Vs and be prepared to work
shifts.

If you feel you have what it takes, we
would very much like to hear from you.

Just write to Kathryn Riley, Head of Personnel Administration
& Recruitment, Morgan Guaranty Trust Company of New York,
P.O. Box 161, Or telephone
33 Lombard Street, London, EC3P 3BH.
Morgan Guaranty Trust Company of New York
her telephone

extension 2747.

it pays to be better.

PERKIN-ELMER DATA SYSTEMS | INTERDATA DIVISION

COMMERCIAL SOFTWARE SUPPORT ANALYSTS

c. £6,500 + CAR

Perkin-Elmer Data Systems is currently one of the fastest growing mini computer companies in the U.K. This rapid expansion means that we need top calibre people who are able to maintain our high standards of customer support. We urgently require software support analysts to service our growing base of commercial installations. These jobs are demanding and necessitate travel throughout the U.K. Applicants must therefore be able to work on their own initiative and deal with a variety of interesting customer situations.

The successful applicant (M/F) should be over 25 and have at least 4 years' experience of COBOL and other commercial software, e.g. ISAM, TP or DBMS. Knowledge of assembly languages and OS software would also be an advantage although not essential.

* Contact Ian Sargent or Angela Nowall for further details.

Telephone Slough 34511

Good with Computers and People?

We are looking for a Data 100
TERMINAL SUPERVISOR in the
Computer Terminal Section of Head Office
at Millbank. The successful person will be
the senior member of the team taking full
day-to-day responsibility for the operation
of the terminal used by ICI Head Office to
transmit to a remote IBM 370 main
frame.

Applicants should have relevant
experience of staff supervision and in
operating a computer terminal and
auxiliary equipment. Familiarity with
transmission circuits and modems would
be desirable. Experience of operating
personalised computing terminals is
desirable but not essential as training can
be provided.

Terminal facilities are likely to be
expanded in the near future, thereby
enriching the job role.

In addition to a starting salary in excess
of £4,000, ICI offers flexible working
hours, a subsidised canteen and
recreation club and a profit sharing
scheme.

If you have the relevant experience and
enthusiasm, please apply
in writing to Miss June
Nichols, ICI Limited, ICI
House, Millbank,
London SW1, or

Modern Management and the Computer in Ealing and Brent

Applications are invited to fill the senior posts of Systems
Manager and Data Base Administrator. These offer
challenging and creative opportunities as they are key
appointments developing further the joint service to
provide non-financial as well as financial applications in the
various Departments of both authorities. The joint service
has recently been restructured and new appointments to
the staff authorised.

Data Base Administrator
POB. Ref. No. 096TC. Salary
£7329-£8073

per annum inclusive—plus car allowance

The London Boroughs of Ealing and Brent have now
completed the first phase of a joint property data base. The
Data Base defines all property in both boroughs based on a
unique property reference number system forming a set of
hub-files. The system is now being operationally tested.
The project uses D1/1 and GIS with on-line programming
facilities to various departments using display screens. The
Administrator will lead a team of designers and two
systems analysts who are in post. The project is managed
by a small group of senior officers representing corporate
interests in Ealing and Brent. Their objective is to provide
an integrated information service relating to all land and
property in both boroughs to greatly improve the operation
and efficiency of property based processes and provide
vital information for management in the planning and
development fields.

A man or woman qualified in a relevant discipline is
required with a wide knowledge of computer systems.
Experience of Local Authority work would be an advantage.

Systems Manager

POB. Ref. No. 097FD. Salary
£7329-£8073 per annum inclusive

The London Boroughs of Ealing and Brent have a team of
six senior systems analysts and systems analysts working
on the development of a wide range of systems,
particularly in the area of financial management
information, public libraries, education, payroll, housing,
administration, etc.
For some time there has been a need for a man or woman
to lead this team and the post of systems manager has
been created for this purpose. The systems manager will
have a major role in creating a plan of computer
development for the two authorities, particularly in the
area of management information and data processing, and
will direct the development of new systems.
This expanding installation provides a wide range of
computer services to local government using an IBM
370/145. The environment includes data base (DL1) and
data processing (C.I.C.S.).

Candidates should have a degree or equivalent
qualification preferably with several years' experience,
which should include the installation of at least one large
system. Experience of Local Authority work would be an
advantage.

A 35-hour flexible working week is in operation.
Assistance will be given with relocation expenses in
approved cases. Interest free loans for season tickets.
For an informal discussion please ring Mr. R. Wayne,
Computer Manager, on 01-992 5566, Extension 2201. It
is intended to hold formal interviews for these posts during
the week commencing 4th September.

Application forms and further details from Personnel
Office, Room A202, 2nd Floor, Millbank, Ealing W5
2BY. Telephone 01-579 2424 Extension 3350.
Closing date 14.8.78. Please quote relevant ref. no.

COMPUTER MANAGER

Earn up to £6,482
Based in the Treasurer's Department at Dorling, this is a
challenging opportunity for the right person to lead the
Council's Computer Team. The present configuration is an ICL
2903 with 60 Disc Drives, Direct data entry, line printer
and card reader.

A large number of systems are being processed with develop-
ment of on-line enquiries now being underway. 37-hour
working week with no shifts. Travel and lodging allow-
ances would be payable if you have to move home.

Computer Personnel Consultants

OIL IN CENTRAL LONDON?

Excellent opportunities exist for people keen to progress their careers within an
expanding International Company providing a range of services to the oil industry in
Europe, Africa, South America, the Middle East and Far East.

The central systems team is responsible for developing group systems distributed to
overseas O.P. centres. Major development plans include the introduction of a Database
on IBM 370 mainframes and a network of IBM System 34 computers throughout
Europe.

CHIEF PROGRAMMER

To £7500

The Chief Programmer will be responsible for project groups of programmers working on
both 370 and System 34 projects. A good COBOL background is essential and a
knowledge of Assembler and RPG II would be useful.

This position will be particularly attractive to those candidates able to demonstrate
qualities of initiative and leadership who wish to advance their careers in a progressive
environment.

ANALYST/PROGRAMMER (COBOL)

To £7000

The Analyst/Programmer, reporting directly to the Projects Manager, will have
responsibility for systems pertaining to the Africa area of the group operation.
Candidates should have a sound COBOL background, along with the ability to liaise with
line management and produce results with a minimum of supervision. The position will
be attractive to persons with proven analysis experience. Of programmers looking for an
excellent opportunity to move into systems analysis. This position will require liaison
with users in London and Paris, therefore candidates must be willing to undertake a
limited amount of short duration travel.

ANALYST/PROGRAMMER (RPG II)

To £6500

Two outstanding Analyst/Programmers are required to assist in the development of a
number of very interesting System 34 projects. Candidates must have a sound
background in RPG II and an ability to communicate with users at the highest levels of
management. A certain amount of travel to Scotland, Holland and Norway is envisaged.
The Company has exciting plans for future projects in this area and successful candidates
can expect a most satisfactory career progression.

Besides genuine career prospects, the company offers a non-contributory pension
scheme, season ticket loan, LVs and 4 weeks holiday.

The continued expansion in Hutchinson Scoggins Recruitment and the formation of Hutchinson Scoggins Contracts to handle contract assignments has necessitated larger offices.

If you are currently contemplating a career move or wish to obtain a lucrative contract (home and overseas) then call us. We are in the market to help you!

ANALYST/ PROGRAMMER

Up to £7,000 p.a.

Based N.W. London

**Would you like to set up and develop your
own commercial installation?**

**Do you want to take responsibility for your
own actions, reporting direct to non DP
senior management?**

**Do you have managerial aspirations and
need an opportunity to prove your
managerial worth?**

If you can truthfully answer all these questions "YES", try this for size.

A new 2803 installation using Cobol in a company making DP products, the subsidiary of a US company. Major DP involvement in the USA and unrestricted access to their expertise. Plenty of user interface and you are the recognised UK authority on DP.

You will be based in an accessible part of NW London and will receive a highly competitive emoluments package, including a salary of up to £7,000 p.a.

Find out more by telephoning Tony Baker on 01-499 4501 during office hours, or on 01-445 3512 evenings and weekends.

Business and Systems Analysts Advance Your Career With An Advanced Installation

Project Leader To £7,600

This is an opportunity which will appeal to those who are project leaders already but would like more responsibility, or those who have a strong commercial systems background and are seeking a managerial role. It will be necessary to deal with all levels of management and some local travel may be necessary.

Typical teams led will consist of between 5 and 8 analysts; therefore it is important that candidates can demonstrate management abilities. At least 5 years DP oriented systems experience is anticipated.

**IBM 3000 HARDWARE
NEW ON-LINE AND
DATABASE PROJECTS**

**25 DAYS HOLIDAY
FLEXITIME
SUBSIDISED CANTEEN**

**CAREER OPPORTUNITIES
EXCELLENT TRAINING
SPORTS/SOCIAL CLUB**

Senior Systems Analyst To £6,600

Will have the ability and desire to progress to the position of project leader in a short time scale. Initially they will either lead project groups of between 2 and 5 analysts or join larger teams headed by project leaders.

The successful applicants will deal with all levels of management and staff in the provisions of business and DP solutions. It is therefore important that they should be communicative and have a highly professional outlook. A systems experience of 3 years or more is anticipated.

There are also excellent opportunities available for those with less experience who wish to join a company with whom they may make their career. These positions are available largely through the growth of the DP department. The installation for which we are recruiting is part of one of the largest commercial organisations in the south-east. It has been shown that they are not afraid to introduce new technology and techniques, and are now one of the most advanced installations in the UK. A major TP network is operative and is scheduled for expansion. Staff development and training are given clear emphasis and opportunities for progression are excellent. Starting salaries are negotiable to the above, dependent on experience and ability. Positions are based in Croydon in a pleasant environment. These are openings to join a young and expanding team of systems professionals. To find out more telephone our CROYDON office or write quoting ref: CW 26-8H enclosing brief career details.

Development and Operating Opportunities

Hayes, West London

Salaries up to £5720 per annum (including London Allowance).

The British Transport Docks Board Computer Centre provides computer systems development and operations services to 19 ports and other port industry organisations. The centre, established in 1969, is currently undertaking a major review of the ports' computing requirements in preparation for the replacement of its large mainframe computer. Mini-computers with visual display terminals and communications facilities have recently been installed at major ports to link up with the equipment at the computer centre. The Board now requires the following staff to facilitate the introduction of the new equipment, to work on a number of interesting new projects and to provide support for existing systems. This provides the opportunity to join a professional and friendly team working to high standards. The Computer Centre is easily accessible from the M4 motorway and the British Rail Western Region Hayes and Harlington station.

Conditions of service include 32 days holiday per annum (including Bank and Public Holidays), a sick pay scheme, pension scheme and 60p per day Lunch Voucher.

Systems Analysts

Responsible for systems analysis, design, development, implementation and maintenance activities and liaison with programming, operations and user staff. Previous experience of systems work is essential.

Programmers

Cobol experience essential.

Operators

The Operators work on a shift basis (for which additional payments are made) and will be required to operate the Centre's present ICL system 4 computer, its eventual replacement, and the data transmission and ancillary equipment. They will also undertake data control duties, which include liaison with users, assembly/disassembly of computer runs and despatch of output. Previous experience of similar work is essential.

Intending applicants are invited to contact Tim Bevan, Systems and Programming Manager, or Joe Dodin, Computer Operations Manager, on 01-573 5045 or write to British Transport Docks Board, Computer Centre, Hayes Road, Southall, Middlesex, UB8 3NE.

**BT British Transport
Docks Board**

ANALYSTS....

... the Keys to your future

- ★ Varied systems development in a multi-national, multi-currency environment
- ★ Superb working conditions including open plan offices and excellent subsidised restaurant
- ★ Attractive COMPANY CAR scheme for senior positions
- ★ Start salaries up to £7,000
- ★ European travel

Your experience will be at least two years of systems design and implementation, coupled with a flexible approach and the ability to "think on your feet". A decided asset would be exposure to one of the following: mini-computers, distributive processing, IBM mainframes, financial and/or general commercial systems.

People with less than the above experience, but who feel they have the potential to succeed in this professional environment, are also invited to apply.

All contact through Capp Associates CROYDON office, telephone or write quoting ref: CG 181-8S.

Shift Leader

(Two shift system)

Not Less Than £4600 + Company Bonus

A vacancy has arisen for a shift leader to work in the Company's Computer Centre located at Graham Street, London, N.1.

The installation consists of an ICL 1903T (128K) ED5004 MTE, etc., supporting a VDU and RJE communications network. In addition a Hewlett Packard 3000 (1/2 magabyte) will be installed in October.

The successful candidate is likely to be in his or her mid-thirties, educated to 'A' level standard, have over 3 years' 1900 operating experience, be conversant with George II and ICL software. Experience of communications equipment would be an additional advantage.

The remuneration indicated above includes Shift and London Allowances. Fringe benefits include subsidised staff restaurant, sports and social club, 4 weeks' holiday and free car park.

For an application form please write to Miss S. G. Ross, Glaxo Holdings Ltd., Graham Street, London N1 8JZ, or telephone Miss T. Hayne, 01-493 4060, ext. 237.

PROGRAMMER/ SYSTEMS SUPERVISOR

S.F.I.A. Educational Trust, a charity, have recently installed an NCR 8260 to deal with the termly payment of school fees.

We are currently seeking an experienced Programmer to join and lead our small but rapidly expanding D.P. installation (expansion in both systems applications and hardware editions).

Candidates should have a knowledge of Cobol 74 and some operating systems.

Commencing salary will be dependent upon age and experience, and a company vehicle will be provided. To obtain an application form please write to:

Mr. D. M. Haines
S.F.I.A. Educational Trust
10 Queen Street, Maldenhead, Berks.
Or Telephone: Maldenhead 44201

PROGRAMMER

A graduate with a degree in M.Sc. or equivalent experience in Computing, with a proven programming background in the area of systems programming, is required for the position of Programmer in the D.P. Section. The successful candidate will be responsible for the design, development and testing of programs for the D.P. Section. The position is a full-time position with a salary of £4,000 per annum. The successful candidate will be required to have a degree in M.Sc. or equivalent experience in Computing, with a proven programming background in the area of systems programming.

International Opportunities at our European Software Technology Centre

Salaries in the range £3500 to £7500
Bedford based

In our European Software Technology Centre, which is being expanded to handle work for the whole Texas Instruments Corporation world-wide, we have the following career opportunities offering the chance to work on an international basis with the most advanced technology in the field. They provide the chance to travel to Europe and to the company's sites in Dallas and Houston in the USA. The option to transfer overseas at some future date is a strong possibility.

Microprocessor Software Engineers

With a degree in mathematics, computer science and preferably some assembly programming experience. A knowledge of PASCAL would be an advantage. Self-motivation and the ability to communicate well at a technical level are essential.

Fortran Programmer

To work in the design automation area developing large suites of programs on our corporate information centre IBM 370/188 complex. A science degree and some experience of technical Fortran programming are essential.

Salary reviews and promotion prospects are entirely merit based and benefits include generous assistance with relocation expenses where appropriate, profit sharing, assistance with purchasing mortgages, subsidised staff restaurant, health insurance and pension plan.

For an application form please telephone Bedford 67465 or 3228 or 3227 or write to Ann Stevens, Personnel Department, Texas Instruments Ltd., Bedford.

EXAS INSTRUMENTS
LIMITED

AVIS

Although they are acknowledged world leaders in vehicle rentals, Avis still have many new objectives. This continued expansion of their operations allows AVIS to offer exceptional career opportunities to ambitious systems staff.

These appointments are based at the Europe, Africa, and Middle East Headquarters located at Bracknell, Berkshire, where a new IBM 3031, one of the first in the country, will be installed this year, followed by a number of mini computers. The positions carry a great deal of responsibility and the widest possible scope for those able to make a positive contribution towards the increased effectiveness of the company's operations.

Data Processing Recruitment Consultants

European Data-Systems Manager Berkshire (European+US Travel)

Salary: Circa £8 - 9K + Expenses and Relocation

A leading US Electronics and Data Products Corporation has retained Logistix to assist in recruiting a European Systems Development Manager to be based at their Berkshire European Headquarters with total responsibility for Systems Development for all their European offices. This very important appointment will appeal to those who enjoy overseas travel in particular to the United States and throughout Europe. The company is currently planning a comprehensive European network comprising mainframe and mini computers with a data-link to their host IBM 370/155 in California. It is anticipated that the successful candidate may be instrumental in advising on the configuration of hardware to replace the present stand-alone mainframe.

A five year forward planning computerisation programme has been drafted and it will be the responsibility of the newly appointed Systems Development Manager in co-operation with the U.S. development team to enhance and further develop broad-based financial, inventory control and communications systems for implementation throughout Europe and the U.K.

This unique opportunity will ideally suit a self-starter with a strong mini computer background and solid systems design experience gained either with a major software house or a sophisticated end user using linked computer systems. Familiarity with COBOL could be useful, however the decision for its use has as yet not been finalised. The successful candidate will be joining a large Corporation whose products are marketed in over 100 countries with over 11,000 employees worldwide, producing sales of \$300 million in 1977; sixty per cent of those sales were attributable to products not in existence 5 years ago, developed through technical commitment to main-stream and nascent technologies. The high salary reflects the importance which our client places on the filling of this appointment and important fringe benefits normally associated with a major US Corporation are of course provided. Interviews will be held within 2 weeks of the publication of this advertisement and it is anticipated that an offer will be made within ten days of interview.

Coral 66 Programmers Contract-South Coast

to £300 p.w. (9 months)

One of Britain's foremost Hardware design and development groups urgently requires three additional team members for one of its CORAL 66 projects. Whilst the hardware selected is DEC PDP 11 it is not essential that applicants are conversant with RSX-11M although it will be necessary to become familiar with that operating system. Of prime importance is very sound current CORAL 66 experience (minimum 18 months) and the willingness to locate Monday to Friday at the company's south coast headquarters. This unique

opportunity is likely to appeal to those interested in frontier technology of a demanding and stimulating nature. Only applicants available at relatively short notice can be considered for these posts. There is a definite possibility that the project will extend beyond 9 months and could if desired lead to a permanent position. Informal interviews will be held as soon as is practicable possible with a view to commencement prior to mid August.

Senior Mini Specialists Holland

Salaries: £9.5-15K.

Our Client is a major International Systems and Software Development Group recognised as Market-leaders in their field. Owing to continued expansion in a wide variety of applications areas including Data Communications, Message Switching, Computer Networking and Mini Computer Software, a significant number of experienced permanent personnel are urgently required.

Emphasis will be placed on technical achievement and in-depth experience in the areas of activity outlined above. Whilst a degree or equivalent qualification in either Computer Science or Mathematics is desirable, significant relevant experience will be considered in lieu. Of essence is

a solid Assembler background within a Mini-computer environment. Project locations throughout the Benelux provide a wide and interesting environment which include Amsterdam, The Hague and Rotterdam. Of prime importance is demonstrable enthusiasm to relocate to the Netherlands for an extended period. Every assistance will be given in relocation, including cost of removal of all personal effects, initial accommodation expenses and a resettlement advance. Interviews will be held in London during August and offers of employment will be made within 10 days of interview.

IMS+Database Holland+London

Salaries: Holland £15K+ London £7K+

One of the World's foremost Software Specialist Groups (not body shop) with H.Q. in the U.S. have asked Logistix to identify top calibre IMS programmers up to Team Leader level and beyond for permanent positions in Holland and London with the option to transfer for a limited or extended period to the U.S.

Suitable applicants must have current IMS (DB or DC) applications or systems programming experience using COBOL, PL/I or BAL with DB/1. It is anticipated that candidates will have worked with

IMS applications for 2 years or longer. Applications cover on-line enquiry systems, banking, sales ordering, stock/inventory control, budgeting and forecasting etc. The scope of projects and the prestige of working with this acclaimed Market Leader will be certain to appeal to the most demanding career minded individuals. The high salaries reflect the prominence which our Client places on the acquisition of these key personnel who are certain to rise rapidly to Consultancy or Management levels.

PERMANENT POSTS - LARGE INSURANCE COMPANY

MAJOR PROJECTS ON NEW 3033

AN EXCEPTIONAL OPPORTUNITY FOR TWO DATA PROCESSING PROFESSIONALS

My Client is one of the largest Insurance Companies in Lower Saxony. The Company's history goes back 250 years. They are financially guaranteed by the State, but operate exactly as a privately owned Company. The Company has modern offices, provides excellent working conditions, and back up basic salaries with outstanding social benefits. All cultural, sports and shopping facilities are close at hand. The openings described below are permanent — relocation expenses will be met by the clients.

SYSTEMS PROGRAMMER

Your first job will be helping replace a large 168 with a 3033. The present system supports 150 terminals both local and remote. Your knowledge of large IBM mainframes will help ensure this upgrade is as smooth as possible. The greater your abilities on this type of architecture then the more varied will be your field of responsibility. Knowledge of German is not a prerequisite but any you have will make settling in easier.

RW31/5

SYSTEMS ANALYST

Are you Project Leader material? Would you like to earn a realistic salary for your efforts? Is your spoken and written German up to scratch? A proven record of completed projects preferably with some Insurance business exposure could secure you this leading post. You will be working on major new Systems with early promotion to Project Leader if you make the grade.

RW 31/6

Telephone GEOFF MARSH on 01-499 4501 any time (24-hour answering service), for more information. If you prefer, you can ring him at home on GARSTON 79536.

CHALLENGES IN REAL-TIME SOFTWARE

North London

TEAM LEADERS

Up to £7,000 + Relocation

SENIOR PROGRAMMERS

Up to £6,000 + Relocation

Our client — a major International corporation — is undertaking a large real-time Development project which is expected to have a major impact on national life in the eighties. The ultimate operational system will be genuinely real-time providing an on-line service 24 hours a day, every day of the year. The highest degrees of technical integrity are therefore sought and, as you may imagine, the hardware includes many interesting specials. The software development function currently has vacancies at senior levels to produce software concerned primarily with on-line data collection, fault analysis and peripheral handling on minis and micros, and data communication with a mainframe. All the openings below offer a real challenge for the dedicated software professional with his technical sights set high and seeking the stimulation of working with other technical high fliers.

Specifically our client is seeking the following people:

1. A SENIOR SOFTWARE PROGRAMMER with a good knowledge of processor hardware to head a small group of three people developing a maintenance system. Ref: RW 31/7
2. A SENIOR APPLICATIONS PROGRAMMER with experience and proved technical capability to join an applications team engaged on systems for interactive data analysis. Ref: RW 31/8
3. A TEAM LEADER initially to join a team of six engaged on the design of a peripheral handling system. Subsequently the person appointed will lead the implementation of the system. Ref: RW 31/9
4. A TEAM LEADER to take charge of a team of four engaged on the technical design of software to drive interactive terminals. Ref: RW 31/10
5. A TEAM LEADER to be responsible for the development of applications programs for interactive analysis. Ref: RW 31/11

All the above posts are situated in residential North London, within easy access to housing at all price levels and abundant social amenities. The positions all carry competitive salaries and large company fringe benefits. If you have practical experience in any relevant field (e.g. process control, command and control systems, or systems software design) we should be pleased to hear from you.

Telephone TONY BAKER on 01-499 4501 any time (24-hour answering service), quoting appropriate reference number, for more information. If you prefer, you can ring Geoff at home on 01-499 3511 evenings or weekends.

Analyst Programmers
c £14,000 tax free plus benefits

Four analyst programmers are required for a new computer department being established at a leading motor distributor in Saudi Arabia, which is due to take delivery of an IBM 370/115 in March 1979. The systems will initially be a mixture of batch and on-line, running under CICS and DOS/VS and written in RPG II.

Benefits

- ★ Free furnished accommodation
- ★ Free company car
- ★ Free medical treatment

Environment

- ★ Leading motor distributor
- ★ New 370/115
- ★ New DP department

Requirements

- ★ Solid systems end programming experience
- ★ At least 18 months' practical experience of CICS, DOS/VS, RPG
- ★ Self motivation
- ★ November start

Successful candidates will ideally have at least 18 months' practical experience of CICS, DOS/VS and RPG. There will be a high degree of user involvement and the positions will suit self starters. Experience of the distributive side of the motor trade would be an added advantage.

These positions are on bachelor status, enjoying the following benefits: 30 days' leave and 15 days' public holidays per annum. Free furnished accommodation of good standard with free electricity and water. Free medical treatment and company car.

FINAL CLIENT INTERVIEWS IN LONDON AUGUST 21-23
To discuss these positions further, please telephone Marlan Tabone on 01-242 9356 (day) or 01-555 5568 (evenings and weekends)

ANALYST/ PROGRAMMERS

Our associated company Amphenol-Tuchol Electronics G M B H requires Analyst/Programmers to work at their Heilbronn plant.

Around 3 years COBOL experience required (preferably on Honeywell 64) in a manufacturing environment. Spoken German is desirable but is not an essential requirement.

Heilbronn is situated on the River Neckar, in pleasant countryside, near Stuttgart.

U.K. interviews will be conducted during the second week in September.

Please apply with full career details to:
The Secretary, Amphenol Limited
Themat Way
Whitstable, Kent CT5 3JF

AMPHENOL Connect up with Amphenol

Senior Data Processing Officer—Teleprocessing

Salary Scale £6773-£7223 per annum

Applications are invited from suitably qualified persons for the above position. At its London Headquarters, the Authority operates two IBM 370/148 Computers connected to a large (150 terminal) teleprocessing network covering the principal centres of population in the Region.

Interesting developments in this network are in hand involving the evolution of IBM's Series/1 and similar equipment.

The software environment is VM with DOS/VS, OS/VS1 and CMS. The teleprocessing monitor is SHADOW with TP programs written in IBM Assembler. Each work is handled almost entirely by Informatics MARK IV file management system.

The successful candidate will be responsible for the maintenance and further development of the TWA SHADOW teleprocessing network. He or she must have been involved in depth with the implementation of at least one major teleprocessing system and be fully conversant with the characteristics of IBM's communication hardware.

This post is open to male and female applicants 24 days holiday (minimum) per annum.

Pension scheme — Interchange arrangements.

Please send your application, giving full details of age, educational qualifications, previous experience and present post quoting reference 78/84 CW or not later than August 14 to:

TEMPORARY PROGRAMMING ADVISER

Applications are invited from graduates to join a small group within the NUMAC computing service concerned with advising, teaching and providing documentation on the use of computer programs of a statistical nature. Applicants should have a good knowledge of computational statistics and an understanding and sympathy with research workers and students in the social sciences. The Computing Laboratory has excellent facilities including powerful IBM hardware with interactive capability and a large repertoire of library programs.

The appointment will be for one year and will be made on one of the following scales according to age, qualifications and experience: Range 1A: £3,680-£8,175 or Range 1B: £5,730-£7,200 per annum. Membership of the Computer Society is a desirable but not essential requirement. Further particulars may be obtained from the Registrar, The University of Kingston/Leeds, Newcastle upon Tyne, NE1 7TU with whom applications (3 copies) together with the names and addresses of three referees should be lodged not later than 28 August 1978. Please quote reference CW.

The British Library HEAD OF SYSTEMS DEVELOPMENT Bibliographical Services Division

The Division maintains an extensive range of services to the library and in the information community in the UK and overseas. It is currently developing its own software, MERLIN, which is a total database management system, based on a new range of ICL 2900 equipment.

The successful candidate's responsibilities will include the planning, organisation and day-to-day control of systems and programming development; project planning in conjunction with user departments; arranging visits, lectures and seminars; and ensuring that proposed enhancements to British Library software are technically and financially viable.

Candidates, aged at least 28, must have a sound knowledge of, and experience in, at least one of the following: large scale data-base systems, communications, software, bibliographical on-line and batch systems and new range ICL 2900 computers.

Inner London sterling salary, as Assistant Keeper First Class, will be within the range £5855 - £8820. Non-contributory pension scheme.

TOP EUROPEAN COMPUTER MANUFACTURER

NEW BUSINESS

LONDON, THE HOME COUNTIES,
SOUTH AND SOUTH-WEST ENGLAND

Our Client, the major UK manufacturer of mainframe and mini computers, are looking to significantly expand their activities. The New Business Sector with offices in North, South and Central London, Southampton, Bristol and East Anglia is seeking to recruit additional high quality sales executives.

The New Business Sector handles amongst other equipment the most successful range of small to medium-sized computer systems ever designed and produced in Europe, winning awards for product design and export achievement. The organisation has invested large sums of money in providing education and training, preventive and remedial engineering as well as excellent software support and implementation services. We believe this to be vital for successful selling.

We have been retained to find:

SALES EXECUTIVES

POTENTIAL EARNINGS £16,000+

QUOTA EARNINGS TO £12,000

HIGH GUARANTEE (NON-RECOVERABLE)

VERY GENEROUS CAR ALLOWANCE

Successful candidates should desirably have the following attributes:

- ★ At least 2 years' experience in selling of computer hardware, software or bureau services.
- ★ A desire to sell in a new business environment.
- ★ Ability to communicate with top level management
- ★ Ambition and self-motivation

Not only does our Client offer an excellent basic package which could be as high as £15,000 (commission is payable over and above the guarantee), but there is also a professional management structure with a well designed career path. The normal benefits attributed to a major organisation together with a very generous car allowance.

Interested applicants should contact Roy Highfield and interviews will be arranged as soon as possible.

SPECIALIST RECRUITMENT CONSULTANTS

THE SALES BIT

More than one way of making a point

WE are all at risk to the vagaries of inter-person communications. We are all emotional beings despite the exterior we present to the world. We are as if in a post-box, looking out through the slit, insecure and secretive, needing to be liked and wanting to be right.

When people communicate to us by voice or by letter we unconsciously carry out our own interpretation upon it which varies in extremes, depending on our emotional state at the time. The same words can veer from pleasing to offensive, depending on our state of mind. It is so easy to "get the wrong end of the stick" because of a gesture, a look, intonation or the semantics of language.

If this reflects the potential attitude of the recipient, then there is obviously some value in the other party considering the possible effect of a communication, before it is transmitted. There is always more than one way of making any statement; a point can always be made without causing offence.

From the salesman's point of view, it is essential to anticipate the effect of every communication, particularly when using the telephone. There are many situations where it is important for him not to say exactly what he thinks because to do so would be destructive.

It is often the salesman's best strategy to make a point against himself when he feels like making one against his client. The response to "I don't understand" could be many.

1. "I'll go through it again."
2. "It's quite simple really."
3. "You weren't listening."

4. "What? All of it?"

When the salesman turns it against himself and says something like "I'm sorry, I didn't put it as clearly as I should have," he makes a real contribution towards developing an empathetic environment for negotiation.

Take another example. "Our payroll is unique."

1. "No it isn't."

2. "That's what they all say."

3. "What makes you think that?"

4. "We could always bend the package for you."

To contradict is destructive and unnecessary. It is far better for the salesman to agree, then qualify the statement. "I imagine it is rather complex; but if we could utilise some of our standard program modules for tax tables and so on, it would reduce system costs."

One often sees the inconsiderate use of language at work in the communications between management and subordinates.

"You have failed" is so much more destructive than "You have not enjoyed the success we know you are capable of." The same thing really, only different; except that the latter demotivates, the other challenges.

We had an excellent candidate in the office the other day I have known for years as a most effective salesman. He asked us to find him a new job, despite his enthusiasm for his company and its product, simply because, after many years of over-performance, his manager told him he had failed. Their loss is someone else's gain, simply as a result of someone saying exactly what they thought at the time without considering its truth in the context of the past performance and its emotional effect on the recipient.

This week's tip. Do not engage mouth before switching on brain.

TRADER

Control standard

FIRST of a new series of standards for use in the evaluation of industrial process control instrumentation, has been published by the British Standards Institution. Entitled BS 5558, *Methods of evaluating the performance of controllers with analogue signals for use in industrial process control*, it will enable manufacturers and users to assess their equipment, and express the results in a consistent and internationally acceptable manner. BS 5558 may be obtained from BSI Sales Department, 101 Pentonville Road, London N1 9ND. Price £7.80.

Distributor

CACHE buffer memory systems, made by Fobri-Tek for the PDP-11, are now to be distributed by Billing Machine Ltd, under the terms of a recently signed agreement. BML has been handling a range of PDP-11 peripherals and peripheral sub-systems for the past five years.

Sticky labels

CONTINUOUS self-adhesive labels for use with computers, are now being manufactured by Stampington Labels of Whaley Bridge, Stockport. The firm plans to have a range of standard size labels always in stock.

Prime offices

NEW headquarters have been set up by Prime Computer in the UK. Its address is Prime Computer (UK) Ltd, The Hounslow Centre, Lampton Road, Hounslow, TW3 1JB. Tel: 01-872 8241.

THE former Stanford Research Institute, now called SRI International, has moved its London office to 5th Floor, 24 Buckingham Gate, SW1E 6LB. The California-based consultancy's main European office remains at 12/16 Addiscombe Road, Croydon.

Puzzle answer

THE first two sequences are digital, and chronological respectively. ATG, CLVSSCAP gives the 12 Zodiac Signs in correct astrological order: Aries, Taurus, Gemini, Cancer, Leo, Virgo, Libra, Scorpio, Sagittarius, Capricorn, Aquarius, Pisces.
